## 4 Overview

Zynq Design PS with Linux and simple frequency counter to measure MGT Reference CLK with Vivado HW-Manager.

Refer to <http://trenz.org/te0715-info> for the current online version of this manual and other available documentation.

### 4.1 Key Features

- Vitis/Vivado 2021.2
- PetaLinux
- SD
- ETH
- MAC from EEPROM
- USB
- I2C
- RTC
- FMeeter
- Modified FSBL (some additional outputs and SI5338 reconfiguration)

**Table 1: Design Revision History**

## 4.3 Release Notes and Known Issues

Issues	Description	Workaround	To be fixed version
QSPI Flash	Programming QSPI fails with Vivado 2021.2	use Vivado 2020.2 or 2019.2 for programming	
Timing problems with Frequency counter	can be ignored	---	with 2018-10-01 update

**Table 2: Known Issues**

## 4.4 Requirements

### 4.4.1 Software

Software	Version	Note
Vitis	2021.2	needed, Vivado is included into Vitis installation
PetaLinux	2021.2	needed
SI ClockBuilder Pro	---	optional

**Table 3: Software**

## 4.4.2 Hardware

Basic description of TE Board Part Files is available on [TE Board Part Files](#).<sup>1</sup>  
 Complete List is available on "<project folder>\board\_files\\*\_board\_files.csv"

Design supports following modules:

Module Model	Board Part Short Name	PCB Revision Support	D D R	QSPI Flash	EM MC	Othe rs	Notes

**Table 4: Hardware Modules**

\* used as reference

Design supports following carriers:

Carrier Model	Notes
TE0701	
TE0703	

Carrier Model	Notes
TE0705	
TE0706 <sup>*</sup>	
TEBA0841-02	

**Table 5: Hardware Carrier**<sup>\*</sup>used as reference

Additional HW Requirements:

Additional Hardware	Notes
USB Cable for JTAG/UART	Check Carrier Board and Programmer for correct type
XMOD Programmer	Carrier Board dependent, only if carrier has no own FTDI

**Table 6: Additional Hardware**

## 4.5 Content

For general structure and usage of the reference design, see [Project Delivery - Xilinx devices](https://wiki.trenz-electronic.de/display/PD/Project+Delivery+-+Xilinx+devices)<sup>2</sup>

### 4.5.1 Design Sources

Type	Location	Notes
Vivado	<project folder>\block_design <project folder>\constraints <project folder>\ip_lib <project folder>\board_files	Vivado Project will be generated by TE Scripts

<sup>2</sup> <https://wiki.trenz-electronic.de/display/PD/Project+Delivery+-+Xilinx+devices>

Type	Location	Notes
Vitis	<project folder>\sw_lib	Additional Software Template for Vitis and apps_list.csv with settings automatically for Vitis app generation
PetaLinux	<project folder>\os\petalinux	PetaLinux template with current configuration

**Table 7: Design sources**

#### 4.5.2 Additional Sources

---

Type	Location	Notes
SI5338	<project folder>\misc\Si5338	SI5338 Project with current PLL Configuration
init.sh	<project folder>\misc\sd\	Additional Initialization Script for Linux ( <a href="#">working from sd card only</a> )

**Table 8: Additional design sources**

#### 4.5.3 Prebuilt

---

File	File-Extension	Description
BIF-File	*.bif	File with description to generate Bin-File
BIN-File	*.bin	Flash Configuration File with Boot-Image (Zynq-FPGAs)
BIT-File	*.bit	FPGA (PL Part) Configuration File
Boot Script-File	*.scr	Distro Boot Script file

File	File-Extension	Description
DebugProbes-File	*.ltx	Definition File for Vivado/Vivado Labtools Debugging Interface
Diverse Reports	---	Report files in different formats
Device Tree	*.dts	Device tree (2 possible, one for u-boot and one for linux)
Hardware-Platform-Description-File	*.xsa	Exported Vivado <a href="#">hardware description file</a> for Vitis and PetaLinux
LabTools Project-File	*.lpr	Vivado Labtools Project File
OS-Image	*.ub	Image with Linux Kernel (On Petalinux optional with Devicetree and RAM-Disk)
Software-Application-File	*.elf	Software Application for Zynq or MicroBlaze Processor Systems

**Table 9: Prebuilt files (only on ZIP with prebuilt content)**

#### 4.5.4 Download

Reference Design is only usable with the specified Vivado/Vitis/PetaLinux version. Do never use different Versions of Xilinx Software for the same Project.

Reference Design is available on:

- [TE0715 "Test Board" Reference Design](#)<sup>3</sup>

<sup>3</sup> [https://shop.trenz-electronic.de/Download/?path=Trenz\\_Electronic/Modules\\_and\\_Module\\_Carriers/4x5/TE0715/Reference\\_Design/2021.2/test\\_board](https://shop.trenz-electronic.de/Download/?path=Trenz_Electronic/Modules_and_Module_Carriers/4x5/TE0715/Reference_Design/2021.2/test_board)

## 5 Design Flow

**!** Reference Design is available with and without prebuilt files. It's recommended to use TE prebuilt files for first launch.

Trenz Electronic provides a tcl based built environment based on Xilinx Design Flow.

See also:

- [AMD Development Tools](#)<sup>4</sup>
- [Vivado Projects - TE Reference Design](#)<sup>5</sup>
- [Project Delivery](#).<sup>6</sup>

The Trenz Electronic FPGA Reference Designs are TCL-script based project. Command files for execution will be generated with "\_create\_win\_setup.cmd" on Windows OS and "\_create\_linux\_setup.sh" on Linux OS.

TE Scripts are only needed to generate the vivado project, all other additional steps are optional and can also be executed by Xilinx Vivado/Vitis GUI. For currently Scripts limitations on Win and Linux OS see: [Project Delivery Currently limitations of functionality](#)<sup>7</sup>

**!** **Caution!** Win OS has a 260 character limit for path lengths which can affect the Vivado tools. To avoid this issue, use Virtual Drive or the shortest possible names and directory locations for the reference design (for example "x:\<project folder>")

1. Run \_create\_win\_setup.cmd/\_create\_linux\_setup.sh and follow instructions on shell:

### \_create\_win\_setup.cmd/\_create\_linux\_setup.sh

```
-----Set design paths-----
-- Run Design with: _create_win_setup
-- Use Design Path: <absolute project path>
-----
-----TE Reference Design-----
-----
-- (0)  Module selection guide, project creation...prebuilt export...
-- (1)  Create minimum setup of CMD-Files and exit Batch
-- (2)  Create maximum setup of CMD-Files and exit Batch
-- (3)  (internal only) Dev
-- (4)  (internal only) Prod
-- (c)  Go to CMD-File Generation (Manual setup)
-- (d)  Go to Documentation (Web Documentation)
-- (g)  Install Board Files from Xilinx Board Store (beta)
-- (a)  Start design with unsupported Vivado Version (beta)
-- (x)  Exit Batch (nothing is done!)
-----
Select (ex.: '0' for module selection guide):
```

2. Press 0 and enter to start "Module Selection Guide"
3. Create project and follow instructions of the product selection guide, settings file will be configured automatically during this process.

<sup>4</sup> <https://wiki.trenz-electronic.de/display/PD/AMD+Development+Tools#AMDDDevelopmentTools-XilinxSoftware-BasicUserGuides>

<sup>5</sup> <https://wiki.trenz-electronic.de/display/PD/Vivado+Projects+-+TE+Reference+Design>

<sup>6</sup> <https://wiki.trenz-electronic.de/display/PD/Project+Delivery+-+Xilinx+devices>

<sup>7</sup> <https://wiki.trenz-electronic.de/display/PD/Project+Delivery+-+Xilinx+devices#ProjectDeliveryXilinxdevices-Currentlylimitationsoffunctionality>

- optional for manual changes: Select correct device and Xilinx install path on "design\_basic\_settings.cmd" and create Vivado project with "vivado\_create\_project\_gui mode.cmd"

 Note: Select correct one, see also [Vivado Board Part Flow](#)<sup>8</sup>

4. Create hardware description file (.xsa file) for PetaLinux project and export to prebuilt folder

**run on Vivado TCL (Script generates design and export files into "\prebuilt\hardware\")**

```
\prebuilt\hardware\")">
TE::hw_build_design -export_prebuilt
```

 Using Vivado GUI is the same, except file export to prebuilt folder.

5. Create and configure your PetaLinux project with exported .xsa-file, see [PetaLinux KICKstart](#)<sup>9</sup>
  - use TE Template from "<project folder>\os\petalinux"
  - use exported .xsa file from "<project folder>\prebuilt\hardware<short name>". **Note:** HW Export from Vivado GUI creates another path as default workspace.
  - The build images are located in the "<plnx-proj-root>/images/linux" directory
6. Configure the **boot.scr** file as needed, see [Distro Boot with Boot.scr](#)<sup>10</sup>
7. Copy PetaLinux build image files to prebuilt folder
  - copy **u-boot.elf**, **u-boot.dtb**, **system.dtb**, **image.ub** and **boot.scr** from "<plnx-proj-root>/images/linux" to prebuilt folder

 "<project folder>\prebuilt\os\petalinux<ddr size>" or "<project folder>\prebuilt\os\petalinux<short name>"

8. Generate Programming Files with Vitis

**run on Vivado TCL (Script generates applications and bootable files, which are defined in "test\_board\sw\_lib\apps\_list.csv")**

```
TE::sw_run_vitis -all
TE::sw_run_vitis (optional; Start Vitis from Vivado GUI or start with TE
Scripts on Vivado TCL)
```

 TCL scripts generate also platform project, this must be done manually in case GUI is used. See [Vitis](#)<sup>11</sup>

<sup>8</sup> <https://wiki.trenz-electronic.de/display/PD/Vivado+Board+Part+Flow>

<sup>9</sup> <https://wiki.trenz-electronic.de/display/PD/PetaLinux+KICKstart>

<sup>10</sup> <https://wiki.trenz-electronic.de/display/PD/Distro+Boot+with+Boot.scr>

<sup>11</sup> <https://wiki.trenz-electronic.de/display/PD/Vitis>

## 6 Launch

### 6.1 Programming

 Check Module and Carrier TRMs for proper HW configuration before you try any design. Reference Design is also available with prebuilt files. It's recommended to use TE prebuilt files for first launch.

 TE0715-0x-30-xx only: HP IO Banks max power supply voltage is 1.8V.

Xilinx documentation for programming and debugging: [Vivado/Vitis/SDSoC-Xilinx Software Programming and Debugging](#)<sup>12</sup>

#### 6.1.1 Get prebuilt boot binaries

1. Run `_create_win_setup.cmd/_create_linux_setup.sh` and follow instructions on shell
2. Press 0 and enter to start "Module Selection Guide"
  - a. Select assembly version
  - b. Validate selection
  - c. Select Create and open delivery binary folder

 Note: Folder "<project folder>\\_binaries\_<Article Name>" with subfolder "boot\_<app name>" for different applications will be generated

#### 6.1.2 QSPI-Boot mode

Optional for **Boot.bin** on QSPI Flash and **image.ub** and **boot.scr** on **SD** or **USB**.

1. Connect **JTAG** and power on carrier with module
2. Open Vivado Project with "vivado\_open\_existing\_project\_guimode.cmd" or if not created, create with "vivado\_create\_project\_guimode.cmd"

##### run on Vivado TCL (Script programs BOOT.bin on QSPI flash)

```
TE::pr_program_flash -swapp u-boot
TE::pr_program_flash -swapp hello_te0715 (optional)
```

3. Copy **image.ub** and **boot.scr** on **SD** or **USB**
  - use files from "<project folder>\\_binaries\_<Article Name>\boot\_linux" from generated binary folder, see: [Get prebuilt boot binaries](#) (see page 22)
  - or use prebuilt file location, see "<project folder>\prebuilt\file\_location.txt"
4. Set Boot Mode to **QSPI-Boot** and insert **SD** or **USB**.
  - Depends on Carrier, see carrier TRM.

<sup>12</sup> <https://wiki.trenz-electronic.de/display/PD/AMD+Development+Tools#AMDDDevelopmentTools-XilinxSoftwareProgrammingandDebugging>

### 6.1.3 SD-Boot mode

1. Copy **image.ub**, **boot.scr** and **Boot.bin** on **SD**
  - use files from "<project folder>\\_binaries\_<Article Name>\boot\_linux" from generated binary folder, see: [Get prebuilt boot binaries](#) (see page 22)
  - or use prebuilt file location, see "<project folder>\prebuilt\file\_location.txt"
  - optional: use startup script **init.sh** for **SD**
2. Set Boot Mode to SD-Boot.
  - Depends on Carrier, see carrier TRM.
3. Insert SD-Card in SD-Slot.

### 6.1.4 JTAG

Not used on this Example.

## 6.2 Usage

1. Prepare HW like described on section [Programming](#) (see page 22)
2. Connect UART USB (most cases same as JTAG)
3. Select SD Card as Boot Mode (or QSPI - depending on step 1)

 Note: See TRM of the Carrier, which is used.

 Starting with Petalinux version 2020.1, the industry standard "Distro-Boot" boot flow for U-Boot was introduced, which significantly expands the possibilities of the boot process and has the primary goal of making booting much more standardised and predictable. The boot options described above describe the common boot processes for this hardware; other boot options are possible. For more information see [Distro Boot with Boot.scr](#)<sup>13</sup>

4. Power On PCB  
**boot process**
  1. Zynq Boot ROM loads FSBL from SD/QSPI into OCM,
  2. FSBL init PS, programs PL using the bitstream and loads U-boot from SD into DDR,
  3. U-boot loads Linux (**image.ub**) from SD/QSPI/... into DDR

### 6.2.1 Linux

1. Open Serial Console (e.g. putty)
  - Speed: 115200
  - select COM Port

 Win OS, see device manager, Linux OS see `dmesg | grep tty` (UART is \*USB1)

2. Linux Console:

<sup>13</sup> <https://wiki.trenz-electronic.de/display/PD/Distro+Boot+with+Boot.scr>

**Note:** Wait until Linux boot finished

3. You can use Linux shell now.

```
i2cdetect -y -r 0    (check I2C 1 Bus)
dmesg | grep rtc     (RTC check)
udhcpc              (ETH0 check)
lsusb               (USB check)
```

4. Option Features

- Webserver to get access to Zynq
  - insert IP on web browser to start web interface
- init.sh scripts
  - add init.sh script on SD, content will be load automatically on startup (template included in "<project folder>\misc\SD")

## 6.2.2 Vivado HW Manager

Open Vivado HW-Manager and add VIO signal to dashboard (\*.ltx located on prebuilt folder).

- Monitoring:
  - Si5338 CLKs:
    - Set radix from VIO signals to unsigned integer. Note: Frequency Counter is inaccurate and displayed unit is Hz
    - MGT CLK is configured to 125MHz by default, FCLK is not configured by default (optional possible over FSBL → 50MHz on delivered configuration, see FSBL description).

**HARDWARE MANAGER** - localhost/xilinx\_tcf/Digilent/25163300025CA

Name	Status
localhost (1)	Connected
xilinx_tcf/Digilent/25163300025CA	Open
arm_dap_0 (0)	N/A
xc7z030_1 (2)	Programmed
XADC (System Monitor)	
hw_vio_1 (zsys_i/vio_0)	OK

**hw\_vios**

hw\_vio\_1

Name	Value	Activity	Direction	VIO
zsys_i/fm_clk125[31:0]	[U] 49999676	↓	Input	hw_vio_1
zsys_i/fm_mgt1[31:0]	[U] 124999191	↓	Input	hw_vio_1
zsys_i/labtools_fmeter_0_update	[B] 0	↓	Input	hw_vio_1

**Figure 1: Vivado Hardware Manager**

# 7 System Design - Vivado

## 7.1 Block Design

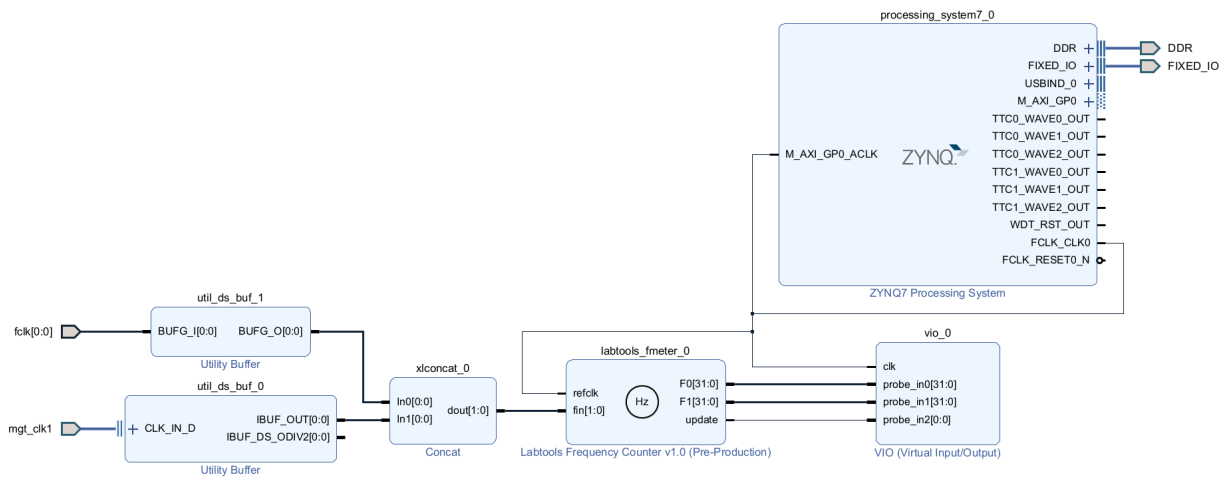

Figure 2: Block Design

### 7.1.1 PS Interfaces

Activated interfaces:

Type	Note
DDR	---
QSPI	MIO
I2C1	MIO
UART0	MIO
GPIO	MIO
ETH, USB Rst	MIO
SD0	MIO

Type	Note
USB0	MIO
ETH0	MIO
TTC0..1	EMIO
SWDT	EMIO

**Table 10: PS Interfaces**

## 7.2 Constrains

### 7.2.1 Basic module constrains

#### **\_i\_bitgen\_common.xdc**

```
set_property BITSTREAM.GENERAL.COMPRESS TRUE [current_design]
set_property CONFIG_VOLTAGE 3.3 [current_design]
set_property CFGBVS VCC0 [current_design]

set_property BITSTREAM.CONFIG.USR_ACCESS_TIMESTAMP [current_design]
```

#### **\_i\_unused\_io.xdc**

```
set_property BITSTREAM.CONFIG.UNUSEDPIN PULLNONE [current_design]
```

### 7.2.2 Design specific constrain

#### **\_i\_io.xdc**

```
set_property PACKAGE_PIN K2 [get_ports {fclk[0]}]
set_property IOSTANDARD LVCMOS18 [get_ports {fclk[0]}]
set_property CLOCK_DEDICATED_ROUTE FALSE [get_nets fclk_IBUF[0]]
```

#### **\_i\_timing.xdc**

```
# for fmeter only
```

```
set_false_path -from [get_clocks clk_fpga_0] -to [get_clocks mgt_clk1_clk_p]  
set_false_path -from [get_clocks mgt_clk1_clk_p] -to [get_clocks clk_fpga_0]
```

## 8 Software Design - Vitis

---

For Vitis project creation, follow instructions from:

[Vitis](#)<sup>14</sup>

### 8.1 Application

---

Template location: "<project folder>\sw\_lib\sw\_apps\"

#### 8.1.1 fsbl

---

TE modified 2021.2 FSBL

General:

- Modified Files: main.c, fsbl\_hooks.h/.c (search for 'TE Mod' on source code)
- Add Files: te\_fsbl\_hooks.h/.c (for hooks and board)
- General Changes:
  - Display FSBL Banner and Device ID

Module Specific:

- Add Files: all TE Files start with te\_\*
  - SI5338 Configuration

#### 8.1.2 fsbl\_flash

---

TE modified 2021.2 FSBL

General:

- Modified Files: main.c
- General Changes:
  - Display FSBL Banner
  - Set FSBL Boot Mode to JTAG
  - Disable Memory initialisation

#### 8.1.3 hello\_te0715

---

Hello TE0715 is a Xilinx Hello World example as endless loop instead of one console output.

#### 8.1.4 u-boot

---

U-Boot.elf is generated with PetaLinux. Vitis is used to generate Boot.bin.

---

<sup>14</sup> <https://wiki.trenz-electronic.de/display/PD/Vitis>

## 9 Software Design - PetaLinux

For PetaLinux installation and project creation, follow instructions from:

- [PetaLinux KICKstart](#)<sup>15</sup>

### 9.1 Config

Start with **petalinux-config** or **petalinux-config --get-hw-description**

Changes:

- CONFIG\_SUBSYSTEM\_ETHERNET\_PS7\_ETHERNET\_0\_MAC=""

### 9.2 U-Boot

Start with **petalinux-config -c u-boot**

Changes:

- CONFIG\_QSPI\_BOOT=y
- CONFIG\_SD\_BOOT=y
- CONFIG\_ENV\_IS\_NOWHERE=y
- CONFIG\_ENV\_OVERWRITE=y (used to overwrite environment parameter)
- CONFIG\_ENV\_IS\_IN\_FAT=y (needed to boot from SD card)
- CONFIG\_ENV\_IS\_IN\_SPI\_FLASH=y (needed to boot from QSPI flash)
- # CONFIG\_ENV\_IS\_IN\_NAND is not set
- CONFIG\_BOOT\_SCRIPT\_OFFSET=0x1920000 (Calculate the start address of partition 3 "bootscr" in the QSPI flash. To do this, add the sizes of partitions 0, 1 and 2 together)
- CONFIG\_ZYNQ\_MAC\_IN\_EEPROM=y
- CONFIG\_ZYNQ\_GEM\_I2C\_MAC\_OFFSET=0xFA
- CONFIG\_SYS\_I2C\_EEPROM\_ADDR=0x50

### 9.3 Device Tree (system-user.dtsi in device-tree and uboot-device-tree)

```
/include/ "system-conf.dtsi"
/ {
    chosen {
        xlnx,eeeprom = &eeeprom;
    };
};

/*----- default -----*/

/*----- QSPI PHY -----*/
&qspi {
    #address-cells = <1>;
    #size-cells = <0>;
    status = "okay";
    flash0: flash@0 {
        compatible = "jedec,spi-nor";
    };
};
```

<sup>15</sup> <https://wiki.trenz-electronic.de/display/PD/PetaLinux+KICKstart>

```

        reg = <0x0>;
        #address-cells = <1>;
        #size-cells = <1>;
    };
};

/*----- ETH PHY -----*/
&gem0 {

    status = "okay";
    ethernet_phy0: ethernet-phy@0 {
        compatible = "marvell,88e1510";
        device_type = "ethernet-phy";
        reg = <0>;
    };
};

/*----- USB PHY -----*/
/{
    usb_phy0: usb_phy@0 {
        compatible = "ulpi-phy";
        //compatible = "usb-nop-xceiv";
        #phy-cells = <0>;
        reg = <0xe0002000 0x1000>;
        view-port = <0x0170>;
        drv-vbus;
    };
};

&usb0 {
    dr_mode = "host";
    //dr_mode = "peripheral";
    usb-phy = <&usb_phy0>;
};

/*----- I2C -----*/
// i2c PLL: 0x70, i2c eeprom: 0x50

&i2c1 {
    rtc@6F { // Real Time Clock
        compatible = "isl12022";
        reg = <0x6F>;
    };

    eeprom: eeprom@50 { //MAC EEPROM
        compatible = "atmel,24c08";
        reg = <0x50>;
    };
};
};

```

## 9.4 FSBL patch

---

Must be add manually --> work in progress

## 9.5 Kernel

---

Start with **petalinux-config -c kernel**

Changes:

- CONFIG\_RTC\_DRV\_ISL12022=y

## 9.6 Rootfs

---

Start with **petalinux-config -c rootfs**

Changes:

- CONFIG\_i2c-tools=y
- CONFIG\_busybox-httpd=y (for web server app)
- CONFIG\_usbutils=y
- CONFIG\_util-linux-umount=y (uses mount/umount function from util-linux instead of busybox)
- CONFIG\_util-linux-mount=y

## 9.7 Applications

---

See "<project folder>\os\petalinux\project-spec\meta-user\recipes-apps\"

### 9.7.1 startup

---

Script App to load init.sh from SD Card if available.

### 9.7.2 webfwu

---

Webserver application suitable for Zynq access. Need busybox-httpd

## 10 Additional Software

---

### 10.1 SI5338

---

File location "<project folder>\misc\SI5338\SI5338-\*.slabtimeproj"

General documentation how you work with this project will be available on [SI5338](https://wiki.trenz-electronic.de/display/PD/SI5338)<sup>16</sup>

---

<sup>16</sup> <https://wiki.trenz-electronic.de/display/PD/SI5338>

## 11 Appx. A: Change History and Legal Notices

### 11.1 Document Change History

## 11.4 Document Warranty

---

The material contained in this document is provided “as is” and is subject to being changed at any time without notice. Trenz Electronic does not warrant the accuracy and completeness of the materials in this document. Further, to the maximum extent permitted by applicable law, Trenz Electronic disclaims all warranties, either express or implied, with regard to this document and any information contained herein, including but not limited to the implied warranties of merchantability, fitness for a particular purpose or non infringement of intellectual property. Trenz Electronic shall not be liable for errors or for incidental or consequential damages in connection with the furnishing, use, or performance of this document or of any information contained herein.

## 11.5 Limitation of Liability

---

In no event will Trenz Electronic, its suppliers, or other third parties mentioned in this document be liable for any damages whatsoever (including, without limitation, those resulting from lost profits, lost data or business interruption) arising out of the use, inability to use, or the results of use of this document, any documents linked to this document, or the materials or information contained at any or all such documents. If your use of the materials or information from this document results in the need for servicing, repair or correction of equipment or data, you assume all costs thereof.

## 11.6 Copyright Notice

---

No part of this manual may be reproduced in any form or by any means (including electronic storage and retrieval or translation into a foreign language) without prior agreement and written consent from Trenz Electronic.

## 11.7 Technology Licenses

---

The hardware / firmware / software described in this document are furnished under a license and may be used / modified / copied only in accordance with the terms of such license.

## 11.8 Environmental Protection

---

To confront directly with the responsibility toward the environment, the global community and eventually also oneself. Such a resolution should be integral part not only of everybody's life. Also enterprises shall be conscious of their social responsibility and contribute to the preservation of our common living space. That is why Trenz Electronic invests in the protection of our Environment.

## 11.9 REACH, RoHS and WEEE

---

### **REACH**

Trenz Electronic is a manufacturer and a distributor of electronic products. It is therefore a so called downstream user in the sense of [REACH](http://guidance.echa.europa.eu/)<sup>20</sup>. The products we supply to you are solely non-chemical products (goods). Moreover and under normal and reasonably foreseeable circumstances of application, the goods supplied to you shall not release any substance. For that, Trenz Electronic is obliged to neither register nor to

---

<sup>20</sup> <http://guidance.echa.europa.eu/>

provide safety data sheet. According to present knowledge and to best of our knowledge, no **SVHC (Substances of Very High Concern) on the Candidate List**<sup>21</sup> are contained in our products. Furthermore, we will immediately and unsolicited inform our customers in compliance with REACH - Article 33 if any substance present in our goods (above a concentration of 0,1 % weight by weight) will be classified as SVHC by the **European Chemicals Agency (ECHA)**<sup>22</sup>.

#### **RoHS**

Trenz Electronic GmbH herewith declares that all its products are developed, manufactured and distributed RoHS compliant.

#### **WEEE**

Information for users within the European Union in accordance with Directive 2002/96/EC of the European Parliament and of the Council of 27 January 2003 on waste electrical and electronic equipment (WEEE).

Users of electrical and electronic equipment in private households are required not to dispose of waste electrical and electronic equipment as unsorted municipal waste and to collect such waste electrical and electronic equipment separately. By the 13 August 2005, Member States shall have ensured that systems are set up allowing final holders and distributors to return waste electrical and electronic equipment at least free of charge. Member States shall ensure the availability and accessibility of the necessary collection facilities. Separate collection is the precondition to ensure specific treatment and recycling of waste electrical and electronic equipment and is necessary to achieve the chosen level of protection of human health and the environment in the European Union. Consumers have to actively contribute to the success of such collection and the return of waste electrical and electronic equipment. Presence of hazardous substances in electrical and electronic equipment results in potential effects on the environment and human health. The symbol consisting of the crossed-out wheeled bin indicates separate collection for waste electrical and electronic equipment.

Trenz Electronic is registered under WEEE-Reg.-Nr. DE97922676.

 2019-06-07
