4 Overview

ZynqMP PS Design with Linux Example and simple frequency counter to measure SI5338 Reference CLK with Vivado HW-Manager.

Wiki Resources page: <http://trenz.org/te0823-info>

4.1 Key Features

- Vitis/Vivado 2020.2
- PetaLinux
- SD
- ETH
- USB
- I2C
- RTC
- FMeter
- MAC from EEPROM
- User LED
- Modified FSBL for SI5338 programming
- Special FSBL for QSPI programming

4.2 Revision History

Date	Vivado	Project Built	Authors	Description

4.4.2 Hardware

Basic description of TE Board Part Files is available on [TE Board Part Files](#).¹

Complete List is available on <design name>/board_files/*_board_files.csv

¹ <https://wiki.trenz-electronic.de/display/PD/TE+Board+Part+Files>

Design supports following modules:

Module Model	Board Part Short Name	PCB Revision Support	DDR	QSPI Flash	EMMC	Others	Notes
TE0823-01-3PIU1FL	3cg_1li_1gb	REV01	1GB	128MB	8GB	NA	Low Profile Connector
TE0823-01-3PIU1FA	3cg_1li_1gb	REV01	1GB	128MB	8GB	NA	NA
TE0823-01-S001	3cg_1li_2gb	REV01	2GB	128MB	8GB	NA	Custom, AN:3PI?1FA
TE0823-01-3PIU1ML	3cg_1li_1gb	REV01	1GB	128MB	8GB	NA	Low Profile Connector, other emmC Manuf.
TE0823-01-3PIU1MA	3cg_1li_1gb	REV01	1GB	128MB	8GB	NA	other emmC Manuf.
TE0823-01-S002	3cg_1li_2gb	REV01	2GB	128MB	8GB	NA	Custom, other emmC Manuf., AN:3PI?1FA

Table 4: Hardware Modules

Design supports following carriers:

Carrier Model	Notes
TE0701	<ul style="list-style-type: none"> Important: See restrictions on usage with 7 Serie Carriers: 4 x 5 SoM Carriers²
TE0703	<ul style="list-style-type: none"> Important: See restrictions on usage with 7 Serie Carriers: 4 x 5 cm carriers³ Used as reference carrier.
TE0705	<ul style="list-style-type: none"> Important: See restrictions on usage with 7 Serie Carriers: 4 x 5 SoM Carriers⁴

² <https://wiki.trenz-electronic.de/display/PD/4+x+5+SoM+Carriers>

³ <https://wiki.trenz-electronic.de/display/PD/4+x+5+SoM+Carriers>

⁴ <https://wiki.trenz-electronic.de/display/PD/4+x+5+SoM+Carriers>

Carrier Model	Notes
TE0706 *	<ul style="list-style-type: none"> Important: See restrictions on usage with 7 Serie Carriers: 4 x 5 SoM Carriers⁵
TEBA0841	<ul style="list-style-type: none"> Important: See restrictions on usage with 7 Serie Carriers: 4 x 5 SoM Carriers⁶ No SD Slot available, pins goes to Pin Header For TEBA0841 REV01, please contact TE support
TEF1001	<ul style="list-style-type: none"> Important: See restrictions on usage with 7 Serie Carriers: 4 x 5 SoM Carriers⁷

Table 5: Hardware Carrier

* used as reference

Additional HW Requirements:

Additional Hardware	Notes
USB Cable for JTAG/UART	Check Carrier Board and Programmer for correct typ
XMOD Programmer	Carrier Board dependent, only if carrier has no own FTDI
Cooler	It's recommended to use cooler on ZynqMP device

Table 6: Additional Hardware

4.5 Content

For general structure and of the reference design, see [Project Delivery - Xilinx devices](#)⁸

4.5.1 Design Sources

Type	Location	Notes
Vivado	<design name>/ block_design <design name>/ constraints <design name>/ ip_lib	Vivado Project will be generated by TE Scripts

⁵ <https://wiki.trenz-electronic.de/display/PD/4+x+5+SoM+Carriers>

⁶ <https://wiki.trenz-electronic.de/display/PD/4+x+5+SoM+Carriers>

⁷ <https://wiki.trenz-electronic.de/display/PD/4+x+5+SoM+Carriers>

⁸ <https://wiki.trenz-electronic.de/display/PD/Project+Delivery+-+Xilinx+devices>

Type	Location	Notes
Vitis	<design name>/sw_lib	Additional Software Template for Vitis and apps_list.csv with settings automatically for Vitis app generation
PetaLinux	<design name>/os/petalinux	PetaLinux template with current configuration

Table 7: Design sources

4.5.2 Additional Sources

Type	Location	Notes
SI5338	<design name>/misc/SI5338	SI5338 Project with current PLL Configuration
init.sh	<design name>/sd/	Additional Initialization Script for Linux

Table 8: Additional design sources

4.5.3 Prebuilt

File	File-Extension	Description
BIF-File	*.bif	File with description to generate Bin-File
BIN-File	*.bin	Flash Configuration File with Boot-Image (Zynq-FPGAs)
BIT-File	*.bit	FPGA (PL Part) Configuration File
DebugProbes-File	*.ltx	Definition File for Vivado/Vivado Labtools Debugging Interface
Diverse Reports	---	Report files in different formats
Hardware-Platform-Specification-Files	*.xsa	Exported Vivado Hardware Specification for Vitis and PetaLinux

File	File-Extension	Description
LabTools Project-File	*.lpr	Vivado Labtools Project File
OS-Image	*.ub	Image with Linux Kernel (On Petalinux optional with Devicetree and RAM-Disk)
Software-Application-File	*.elf	Software Application for Zynq or MicroBlaze Processor Systems

Table 9: Prebuilt files (only on ZIP with prebuilt content)

4.5.4 Download

Reference Design is only usable with the specified Vivado/SDK/PetaLinux/SDx version. Do never use different Versions of Xilinx Software for the same Project.

Reference Design is available on:

- [TE0823 "Test Board" Reference Design](https://shop.trenz-electronic.de/Download/?path=Trenz_Electronic/Modules_and_Module_Carriers/4x5/TE0823/Reference_Design/2020.2/test_board)⁹

⁹ https://shop.trenz-electronic.de/Download/?path=Trenz_Electronic/Modules_and_Module_Carriers/4x5/TE0823/Reference_Design/2020.2/test_board

5 Design Flow

⚠ Reference Design is available with and without prebuilt files. It's recommended to use TE prebuilt files for first launch.

Trenz Electronic provides a tcl based built environment based on Xilinx Design Flow.

See also:

- [Xilinx Development Tools](#)¹⁰
- [Vivado Projects - TE Reference Design](#)¹¹
- [Project Delivery](#).¹²

The Trenz Electronic FPGA Reference Designs are TCL-script based project. Command files for execution will be generated with "_create_win_setup.cmd" on Windows OS and "_create_linux_setup.sh" on Linux OS.

TE Scripts are only needed to generate the vivado project, all other additional steps are optional and can also be executed by Xilinx Vivado/SDK GUI. For currently Scripts limitations on Win and Linux OS see: [Project Delivery Currently limitations of functionality](#)¹³

⚠ Caution! Win OS has a 260 character limit for path lengths which can affect the Vivado tools. To avoid this issue, use Virtual Drive or the shortest possible names and directory locations for the reference design (for example "x:\<project folder>")

1. Run _create_win_setup.cmd/_create_linux_setup.sh and follow instructions on shell:

_create_win_setup.cmd/_create_linux_setup.sh

```
-----Set design paths-----
-- Run Design with: _create_win_setup
-- Use Design Path: <absolute project path>
-----
-----TE Reference Design-----
-----
-- (0)  Module selection guide, project creation...prebuilt export...
-- (1)  Create minimum setup of CMD-Files and exit Batch
-- (2)  Create maximum setup of CMD-Files and exit Batch
-- (3)  (internal only) Dev
-- (4)  (internal only) Prod
-- (c)  Go to CMD-File Generation (Manual setup)
-- (d)  Go to Documentation (Web Documentation)
-- (g)  Install Board Files from Xilinx Board Store (beta)
-- (a)  Start design with unsupported Vivado Version (beta)
-- (x)  Exit Batch (nothing is done!)
----
Select (ex.: '0' for module selection guide):
```

2. Press 0 and enter to start "Module Selection Guide"

¹⁰ <https://wiki.trenz-electronic.de/display/PD/Xilinx+Development+Tools#XilinxDevelopmentTools-XilinxSoftware-BasicUserGuides>

¹¹ <https://wiki.trenz-electronic.de/display/PD/Vivado+Projects+-+TE+Reference+Design>

¹² <https://wiki.trenz-electronic.de/display/PD/Project+Delivery+-+Xilinx+devices>

¹³ <https://wiki.trenz-electronic.de/display/PD/Project+Delivery+-+Xilinx+devices#ProjectDeliveryXilinxdevices-Currentlylimitationsoffunctionality>

3. (optional Win OS) Generate Virtual Drive or use short directory for the reference design (for example x: \<design name>)
4. Create project and follow instructions of the product selection guide, settings file will be configured automatically during this process.
 - optional for manual changes: Select correct device and Xilinx install path on "design_basic_settings.cmd" and create Vivado project with "vivado_create_project_gui mode.cmd"

 Note: Select correct one, see also [Vivado Board Part Flow](#)¹⁴

5. Create hardware description file (.xsa file) for PetaLinux project and export to prebuilt folder

run on Vivado TCL (Script generates design and export files into "\prebuilt\hardware\")

```
\prebuilt\hardware\")">
TE::hw_build_design -export_prebuilt
```

 Using Vivado GUI is the same, except file export to prebuilt folder.

6. Create and configure your PetaLinux project with exported .xsa-file, see [PetaLinux KICKstart](#)¹⁵
 - use TE Template from "<project folder>\os\petalinux"
 - use exported .xsa file from "<project folder>\prebuilt\hardware\<short name>". **Note:** HW Export from Vivado GUI creates another path as default workspace.
 - The build images are located in the "<plnx-proj-root>/images/linux" directory
7. Configure the **boot.scr** file as needed, see [Distro Boot with Boot.scr](#)¹⁶
8. Copy PetaLinux build image files to prebuilt folder
 - copy **u-boot.elf**, **image.ub** and **boot.scr** from "<plnx-proj-root>/images/linux" to prebuilt folder

 "<project folder>\prebuilt\os\petalinux\<ddr size>" or "<project folder>\prebuilt\os\petalinux\<short name>"

9. Generate Programming Files with Vitis

run on Vivado TCL (Script generates applications and bootable files, which are defined in "test_board\sw_lib\apps_list.csv")

```
TE::sw_run_vitis -all
TE::sw_run_vitis (optional; Start Vitis from Vivado GUI or start with TE
Scripts on Vivado TCL)
```

 TCL scripts generate also platform project, this must be done manually in case GUI is used. See [Vitis](#)¹⁷

¹⁴ <https://wiki.trenz-electronic.de/display/PD/Vivado+Board+Part+Flow>

¹⁵ <https://wiki.trenz-electronic.de/display/PD/PetaLinux+KICKstart>

¹⁶ <https://wiki.trenz-electronic.de/display/PD/Distro+Boot+with+Boot.scr>

¹⁷ <https://wiki.trenz-electronic.de/display/PD/Vitis>

6 Launch

6.1 Programming

 Check Module and Carrier TRMs for proper HW configuration before you try any design. Reference Design is also available with prebuilt files. It's recommended to use TE prebuilt files for first launch.

Xilinx documentation for programming and debugging: [Vivado/SDK/SDSoC-Xilinx Software Programming and Debugging](https://www.xilinx.com/products/development-tools/vivado/index.html)¹⁸

Note: Depending on CPLD Firmware and Boot Mode settings, QSPI boot with Linux image on SD or complete SD Boot is possible.

6.1.1 Get prebuilt boot binaries

1. Run `_create_win_setup.cmd/_create_linux_setup.sh` and follow instructions on shell
2. Press 0 and enter to start "Module Selection Guide"
 - a. Select assembly version
 - b. Validate selection
 - c. Select Create and open delivery binary folder

 Note: Folder "<project folder>_binaries_<Article Name>" with subfolder "boot_<app name>" for different applications will be generated

6.1.2 QSPI-Boot mode

Option for **Boot.bin** on QSPI Flash and **image.ub** and **boot.scr** on **SD** or **USB**.

1. Connect **JTAG** and power on carrier with module
2. Open Vivado Project with "vivado_open_existing_project_guimode.cmd" or if not created, create with "vivado_create_project_guimode.cmd"

run on Vivado TCL (Script programs BOOT.bin on QSPI flash)

```
TE::pr_program_flash -swapp u-boot
TE::pr_program_flash -swapp hello_te0823 (optional)
```

 To program with Vitis/Vivado GUI, use special FSBL (fsbl_flash) on setup

3. Copy **image.ub** and **boot.scr** on **SD** or **USB**
 - use files from "<project folder>_binaries_<Article Name>\boot_linux" from generated binary folder, see: [Get prebuilt boot binaries](#) (see page 15)
 - or use prebuilt file location, see "<project folder>\prebuilt\file_location.txt"
4. Set Boot Mode to **QSPI-Boot** and insert **SD** or **USB**.
 - Depends on Carrier, see carrier TRM.

¹⁸ <https://wiki.trenz-electronic.de/display/PD/Xilinx+Development+Tools#XilinxDevelopmentTools-XilinxSoftwareProgrammingandDebugging>

6.1.3 SD-Boot mode

1. Copy **image.ub**, **boot.src** and **Boot.bin** on **SD**
 - use files from "<project folder>_binaries_<Article Name>\boot_linux" from generated binary folder, see: [Get prebuilt boot binaries](#)(see page 15)
 - or use prebuilt file location, see "<project folder>\prebuilt\file_location.txt"
2. Set Boot Mode to SD-Boot.
 - Depends on Carrier, see carrier TRM.
3. Insert SD-Card in SD-Slot.

6.1.4 JTAG

Not used on this Example.

6.2 Usage

1. Prepare HW like described on section [Programming](#)(see page 15)
2. Connect UART USB (most cases same as JTAG)
3. Select SD Card or QSPI as Boot Mode (Depends on used programming variant)

 Note: See TRM of the Carrier, which is used.

 Starting with Petalinux version 2020.1, the industry standard "Distro-Boot" boot flow for U-Boot was introduced, which significantly expands the possibilities of the boot process and has the primary goal of making booting much more standardised and predictable. The boot options described above describe the common boot processes for this hardware; other boot options are possible. For more information see [Distro Boot with Boot.scr](#)¹⁹

4. Power On PCB
boot process
 1. ZynqMP Boot ROM loads PMU Firmware and FSBL from SD/QSPI Flash into OCM
 2. FSBL init PS, programs PL using the bitstream and loadsloads ATF(bl31.elf) and U-boot from SD into DDR
 3. U-boot loads Linux (**image.ub**) from SD/QSPI/... into DDR

6.2.1 Linux

1. Open Serial Console (e.g. putty)
 - Speed: 115200
 - Select COM Port

 Win OS, see device manager, Linux OS see dmesg |grep tty (UART is *USB1)

2. Linux Console:

¹⁹ <https://wiki.trenz-electronic.de/display/PD/Distro+Boot+with+Boot.scr>

```
petalinux login: root
Password: root
```

 Note: Wait until Linux boot finished

3. You can use Linux shell now.

```
i2cdetect -y -r 0    (check I2C 0 Bus)
dmesg | grep rtc     (RTC check)
udhcpd              (ETH0 check)
lsusb               (USB check)
```

4. Option Features

- Webserver to get access to Zynq
 - insert IP on web browser to start web interface
- init.sh scripts
 - add init.sh script on SD, content will be load automatically on startup (template included in ./misc/SD)

6.2.2 Vivado HW Manager

1. Open Vivado HW-Manager and add VIO signal to dashboard (*.ltx located on prebuilt folder).

Control:

- GTR Power: set X0=0 and X1=1 to disable GTR Power
- USER LED: On/OFF

Monitoring:

- SI5338_CLK0 Counter: 200MHz with example Design
 - Set radix from VIO signals to unsigned integer.
- Note: Frequency Counter is inaccurate and displayed unit is Hz
- ETH PHY LEDs

HARDWARE MANAGER - localhost/xilinx_tcf/Digilent/251633002673A

set_property PACKAGE_PIN A15 [get_ports {USRLED[0]}]
set_property IOSTANDARD LVCMOS18 [get_ports {USRLED*}]
set_property PACKAGE_PIN B14 [get_ports {x1[0]}]
set_property IOSTANDARD LVCMOS18 [get_ports {x1[0]}]
```

8 Software Design - Vitis

For SDK project creation, follow instructions from:

[Vitis](#)²⁰

8.1 Application

Template location: `./sw_lib/sw_apps/`

8.1.1 zynqmp_fsbl

TE modified 2020.2 FSBL

General:

- Modified Files: `xfsbl_main.c`, `xfsbl_hooks.h/.c`, `xfsbl_board.h/.c` (search for 'TE Mod' on source code)
- Add Files: `te_xfsbl_hooks.h/.c` (for hooks and board)\n
- General Changes:
 - Display FSBL Banner and Device Name

Module Specific:

- Add Files: all TE Files start with `te_*`
 - Si5338 Configuration
 - ETH+OTG Reset over MIO

8.1.2 zynqmp_fsbl_flash

TE modified 2020.2 FSBL

General:

- Modified Files: `xfsbl_initialisation.c`, `xfsbl_hw.h`, `xfsbl_handoff.c`, `xfsbl_main.c`
- General Changes:
 - Display FSBL Banner
 - Set FSBL Boot Mode to JTAG
 - Disable Memory initialisation

8.1.3 zynqmp_pmufw

Xilinx default PMU firmware.

8.1.4 hello_te0823

Hello TE0823 is a Xilinx Hello World example as endless loop instead of one console output.

²⁰ <https://wiki.trenz-electronic.de/display/PD/Vitis>

8.1.5 u-boot

U-Boot.elf is generated with PetaLinux. SDK/HSI is used to generate Boot.bin.

9 Software Design - PetaLinux

For PetaLinux installation and project creation, follow instructions from:

- [PetaLinux KICKstart](#)²¹

9.1 Config

Start with **petalinux-config** or **petalinux-config --get-hw-description**

Changes:

- CONFIG_SUBSYSTEM_PRIMARY_SD_PSU_SD_1_SELECT=y
- CONFIG_SUBSYSTEM_ETHERNET_PSU_ETHERNET_3_MAC=""

9.2 U-Boot

Start with **petalinux-config -c u-boot**

Changes:

- CONFIG_ENV_IS_NOWHERE=y
- # CONFIG_ENV_IS_IN_SPI_FLASH is not set
- CONFIG_I2C_EEPROM=y
- CONFIG_ZYNQ_GEM_I2C_MAC_OFFSET=0xFA
- CONFIG_SYS_I2C_EEPROM_ADDR=0x50
- CONFIG_SYS_I2C_EEPROM_BUS=0
- CONFIG_SYS_EEPROM_SIZE=256
- CONFIG_SYS_EEPROM_PAGE_WRITE_BITS=0
- CONFIG_SYS_EEPROM_PAGE_WRITE_DELAY_MS=0
- CONFIG_SYS_I2C_EEPROM_ADDR_LEN=1
- CONFIG_SYS_I2C_EEPROM_ADDR_OVERFLOW=0

Change platform-top.h:

9.3 Device Tree

```
/include/ "system-conf.dtsi"
/ {
    chosen {

9.4 FSBL patch

Must be add manually, see template

9.5 Kernel

Start with **petalinux-config -c kernel**

Changes:

- CONFIG_CPU_IDLE is not set (only needed to fix JTAG Debug issue)
- CONFIG_CPU_FREQ is not set (only needed to fix JTAG Debug issue)
- CONFIG_EDAC_CORTEX_ARM64=y

9.6 Rootfs

Start with **petalinux-config -c rootfs**

Changes:

- CONFIG_i2c-tools=y
- CONFIG_busybox-httpd=y (for web server app)
- CONFIG_packagegroup-petalinux-utils(util-linux,cpufrequtils,bridge-utils,mtd-utils,usbutils,pciutils,canutils,i2c-tools,smartmontools,e2fsprogs)

9.7 Applications

See "<project folder>\os\petalinux\project-spec\meta-user\recipes-apps\"

9.7.1 startup

Script App to load init.sh from SD Card if available.

See: \os\petalinux\project-spec\meta-user\recipes-apps\startup\files

9.7.2 webfwu

Webserver application accemble for Zynq access. Need busybox-httpd

10 Additional Software

10.1 SI5338

File location <design name>/misc/Si5338/Si5338-*.slabtimeproj

General documentation how you work with these project will be available on [Si5338](#)²²

No part of this manual may be reproduced in any form or by any means (including electronic storage and retrieval or translation into a foreign language) without prior agreement and written consent from Trenz Electronic.

11.7 Technology Licenses

The hardware / firmware / software described in this document are furnished under a license and may be used / modified / copied only in accordance with the terms of such license.

11.8 Environmental Protection

To confront directly with the responsibility toward the environment, the global community and eventually also oneself. Such a resolution should be integral part not only of everybody's life. Also enterprises shall be conscious of their social responsibility and contribute to the preservation of our common living space. That is why Trenz Electronic invests in the protection of our Environment.

11.9 REACH, RoHS and WEEE

REACH

Trenz Electronic is a manufacturer and a distributor of electronic products. It is therefore a so called downstream user in the sense of [REACH](#)²⁶. The products we supply to you are solely non-chemical products (goods). Moreover and under normal and reasonably foreseeable circumstances of application, the goods supplied to you shall not release any substance. For that, Trenz Electronic is obliged to neither register nor to provide safety data sheet. According to present knowledge and to best of our knowledge, no [SVHC \(Substances of Very High Concern\) on the Candidate List](#)²⁷ are contained in our products. Furthermore, we will immediately and unsolicited inform our customers in compliance with REACH - Article 33 if any substance present in our goods (above a concentration of 0,1 % weight by weight) will be classified as SVHC by the [European Chemicals Agency \(ECHA\)](#)²⁸.

²⁶ <http://guidance.echa.europa.eu/>

²⁷ <https://echa.europa.eu/candidate-list-table>

²⁸ <http://www.echa.europa.eu/>

RoHS

Trenz Electronic GmbH herewith declares that all its products are developed, manufactured and distributed RoHS compliant.

WEEE

Information for users within the European Union in accordance with Directive 2002/96/EC of the European Parliament and of the Council of 27 January 2003 on waste electrical and electronic equipment (WEEE).

Users of electrical and electronic equipment in private households are required not to dispose of waste electrical and electronic equipment as unsorted municipal waste and to collect such waste electrical and electronic equipment separately. By the 13 August 2005, Member States shall have ensured that systems are set up allowing final holders and distributors to return waste electrical and electronic equipment at least free of charge. Member States shall ensure the availability and accessibility of the necessary collection facilities. Separate collection is the precondition to ensure specific treatment and recycling of waste electrical and electronic equipment and is necessary to achieve the chosen level of protection of human health and the environment in the European Union. Consumers have to actively contribute to the success of such collection and the return of waste electrical and electronic equipment. Presence of hazardous substances in electrical and electronic equipment results in potential effects on the environment and human health. The symbol consisting of the crossed-out wheeled bin indicates separate collection for waste electrical and electronic equipment.

Trenz Electronic is registered under WEEE-Reg.-Nr. DE97922676.
