4 Overview

Linux with basic periphery of TE0807 Starterkit (TEBF0808 Carrier).

Refer to <http://trenz.org/te0807-info> for the current online version of this manual and other available documentation.

4.1 Key Features

- Vitis/Vivado 2019.2
- TEBF0808
- Linux
- USB
- ETH
- MAC from EEPROM
- PCIe
- SATA
- SD
- I2C
- RGPIO
- DP
- user LED access
- Modified FSBL for Si5338 programming / petalinux patch
- Special FSBL for QSPI Programming

4.2 Revision History

Table 1: Design Revision History

4.3 Release Notes and Know Issues

Issues	Description	Workaround/Solution	To be fixed version
Flash access on Linux	Device tree is not correct on Linux	add compatibility to "compatible "jedec,spi-nor""	Solved with 20180524 update
USB UART Terminal is blocked / SDK Debugging is blocked	This happens only with 2017.4 Linux , when JTAG connection is established on Vivado HW Manager.	Do not use HW Manager connection, or if debugging is nessecary: <ol style="list-style-type: none"> 1. Boot linux with usb terminal 2. From the terminal: root root mount ifconfig eth0 	Solved with 20180205 update

Issues	Description	Workaround/Solution	To be fixed version
		3. Open two new SSH terminals via ethernet: root root , run user application ... 4. Exit and close the usb terminal	

Table 2: Known Issues

4.4 Requirements

4.4.1 Software

Software	Version	Note
Vitis	2020.2	needed, Vivado is included into Vitis installation
PetaLinux	2020.2	needed
SI ClockBuilder Pro	---	optional

Table 3: Software

4.4.2 Hardware

Basic description of TE Board Part Files is available on [TE Board Part Files](#).¹

Complete List is available on <design name>/board_files/*_board_files.csv

Design supports following modules:

Module Model	Board Part Short Name	PCB Revision Support	DDR	QSPI Flash	EM MC	Others	Notes
TE0807-01-07EV-ES	es2_2gb	REV01	2GB	64MB	NA	NA	Not longer supported by vivado

¹ <https://wiki.trenz-electronic.de/display/PD/TE+Board+Part+Files>

Module Model	Board Part Short Name	PCB Revision Support	DDR	QSPI Flash	EM MC	Others	Notes
TE0807-02-07EV-1E	7ev_1e_4gb	REV02	4GB	128MB	NA	NA	NA
TE0807-02-07EV-1EK	7ev_1e_4gb	REV02	4GB	128MB	NA	NA	with heat sink
TE0807-02-4BE21-A	4eg_1e_4gb	REV02	4GB	128MB	NA	NA	NA
TE0807-02-7DE21-A	7ev_1e_4gb	REV02	4GB	128MB	NA	NA	NA
TE0807-02-7DI21-C	7ev_1i_4gb	REV02	4GB	128MB	NA	NA	without encryption
TE0807-02-7DI21-A	7ev_1i_4gb	REV02	4GB	128MB	NA	NA	NA
TE0807-02-4AI21-A	4cg_1i_4gb	REV02	4GB	128MB	NA	NA	NA
TE0807-02-5AI21-A	5cg_1i_4gb	REV02	4GB	128MB	NA	NA	NA
TE0807-02-7AI21-A	7cg_1i_4gb	REV02	4GB	128MB	NA	NA	NA
TE0807-02-7DI24-A	7ev_1i_4gb	REV02	4GB	512MB	NA	NA	NA
TE0807-02-7DE21-AK	7ev_1e_4gb	REV02	4GB	128MB	NA	NA	with heat sink
TE0807-02-4AI21-X	4cg_1i_4gb	REV02	4GB	128MB	NA	NA	U41 replaced with diode

Module Model	Board Part Short Name	PCB Revision Support	DDR	QSPI Flash	EM MC	Others	Notes
TE0807-02-4BE21-AK	4eg_1e_4gb	REV02	4GB	128MB	NA	NA	with heat sink

TE0807-03-7DI24-A	7ev_1i_4gb	REV03	4GB	512MB	NA	NA	NA

Table 4: Hardware Modules

Note: Design contains also Board Part Files for TE0807 only configuration, this board part files are not used for this reference design.

Design supports following carriers:

Carrier Model	Notes
TEBF0808	Used as reference carrier. Important: CPLD Firmware REV07 or newer is recommended

Table 5: Hardware Carrier

Additional HW Requirements:

Additional Hardware	Notes
DP Monitor	Optional HW Not all monitors are supported, also Adapter to other Standard can make trouble. Design was tested with DELL U2412M

Additional Hardware	Notes
USB Keyboard	Optional HW Can be used to get access to console which is show on DP
USB Stick	Optional HW USB was tested with USB memory stick
Sata Disk	Optional HW
PCIe Card	Optional HW
ETH cable	Optional HW Ethernet works with DHCP, but can be setup also manually
SD card	with fat32 partiton

Table 6: Additional Hardware

4.5 Content

For general structure and of the reference design, see [Project Delivery - Xilinx devices](#)²

4.5.1 Design Sources

Type	Location	Notes
Vivado	<design name>/ block_design <design name>/ constraints <design name>/ ip_lib	Vivado Project will be generated by TE Scripts
Vitis	<design name>/ sw_lib	Additional Software Template for Vitis and apps_list.csv with settings automatically for Vitis app generation

² <https://wiki.trenz-electronic.de/display/PD/Project+Delivery+-+Xilinx+devices>

Type	Location	Notes
PetaLinux	<design name>/os/petalinux	PetaLinux template with current configuration

Table 7: Design sources

4.5.2 Additional Sources

Type	Location	Notes
SI5345	<design name>/misc/SI5345	SI5345 Project with current PLL Configuration
init.sh	<design name>/sd/	Additional Initialization Script for Linux

Table 8: Additional design sources

4.5.3 Prebuilt

File	File-Extension	Description
BIF-File	*.bif	File with description to generate Bin-File
BIN-File	*.bin	Flash Configuration File with Boot-Image (Zynq-FPGAs)
BIT-File	*.bit	FPGA (PL Part) Configuration File
Boot Source	*.scr	Distro Boot file
DebugProbes-File	*.ltx	Definition File for Vivado/Vivado Labtools Debugging Interface
Diverse Reports	---	Report files in different formats
Hardware-Platform-Specification-Files	*.xsa	Exported Vivado Hardware Specification for Vitis and PetaLinux

File	File-Extension	Description
LabTools Project-File	*.lpr	Vivado Labtools Project File
OS-Image	*.ub	Image with Linux Kernel (On Petalinux optional with Devicetree and RAM-Disk)
Software-Application-File	*.elf	Software Application for Zynq or MicroBlaze Processor Systems

Table 9: Prebuilt files (only on ZIP with prebuilt content)

4.5.4 Download

Reference Design is only usable with the specified Vivado/SDK/PetaLinux/SDx version. Do never use different Versions of Xilinx Software for the same Project.

Reference Design is available on:

- [TE0807 "StarterKit" Reference Design](https://shop.trenz-electronic.de/Download/?path=Trenz_Electronic/Modules_and_Module_Carriers/5.2x7.6/TE0807/Reference_Design/2020.2/StarterKit)³

³ https://shop.trenz-electronic.de/Download/?path=Trenz_Electronic/Modules_and_Module_Carriers/5.2x7.6/TE0807/Reference_Design/2020.2/StarterKit

5 Design Flow

! Reference Design is available with and without prebuilt files. It's recommended to use TE prebuilt files for first lunch.

Trenz Electronic provides a tcl based built environment based on Xilinx Design Flow.

See also:

- [Xilinx Development Tools](#)⁴
- [Vivado Projects - TE Reference Design](#)⁵
- [Project Delivery](#).⁶

The Trenz Electronic FPGA Reference Designs are TCL-script based project. Command files for execution will be generated with "_create_win_setup.cmd" on Windows OS and "_create_linux_setup.sh" on Linux OS.

TE Scripts are only needed to generate the vivado project, all other additional steps are optional and can also be executed by Xilinx Vivado/SDK GUI. For currently Scripts limitations on Win and Linux OS see: [Project Delivery Currently limitations of functionality](#)⁷

1. _create_win_setup.cmd/_create_linux_setup.sh and follow instructions on shell:

```

C:\WINDOWS\system32\cmd.exe
B:\Design\cores\xilinx\2018.3\design\TE0803\StarterKit>setlocal
-- Set design paths--
-- Run Design with: _create_win_setup
-- Use Design Path: B:\Design\cores\xilinx\2018.3\design\TE0803\StarterKit\
-- TE Reference Design--
-- (c) Go to CMD-File Generation (Manual setup)
-- (d) Go to Documentation (Web Documentation)
-- (x) Exit Batch (nothing is done!)
-- (0) Module selection guide, project creation...
-- (1) Create minimum setup of CMD-Files and exit Batch
-- (2) Create maximum setup of CMD-Files and exit Batch
--
Select (ex.: '0' for module selection guide):
  
```

2. Press 0 and enter to start "Module Selection Guide"
3. (optional Win OS) Generate Virtual Drive or use short directory for the reference design (for example x: \<design name>)
4. Create Project (follow instruction of the product selection guide), settings file will be configured automatically during this process
 - a. (optional for manual changes) Select correct device and Xilinx install path on "design_basic_settings.cmd" and create Vivado project with "vivado_create_project_guiemode.cmd"

Note: Select correct one, see [TE Board Part Files](#)⁸

Important: Use Board Part Files, which ends with *_tebf0808
5. Create XSA and export to prebuilt folder

⁴ <https://wiki.trenz-electronic.de/display/PD/Xilinx+Development+Tools#XilinxDevelopmentTools-XilinxSoftware-BasicUserGuides>

⁵ <https://wiki.trenz-electronic.de/display/PD/Vivado+Projects+-+TE+Reference+Design>

⁶ <https://wiki.trenz-electronic.de/display/PD/Project+Delivery+-+Xilinx+devices>

⁷ <https://wiki.trenz-electronic.de/display/PD/Project+Delivery+-+Xilinx+devices#ProjectDeliveryXilinxdevices-Currentlylimitationsoffunctionality>

⁸ <https://wiki.trenz-electronic.de/display/PD/TE+Board+Part+Files>

- a. Run on Vivado TCL: `TE::hw_build_design -export_prebuilt`
Note: Script generate design and export files into `\prebuilt\hardware\<short dir>`. Use GUI is the same, except file export to prebuilt folder
6. Create Linux (bl31.elf, uboot.elf, image.ub, boot.src, bl31.elf) with exported XSA
 - a. HDF is exported to `"prebuilt\hardware\<short name>"`
Note: HW Export from Vivado GUI create another path as default workspace.
Create Linux images on VM, see [PetaLinux KICKstart](#)⁹
 - i. Use TE Template from `/os/petalinux`
7. Add Linux files (bl31.elf, uboot.elf and image.ub) to prebuilt folder
 - a. `prebuilt\os\petalinux\<ddr size>"` or `"prebuilt\os\petalinux\<short name>"`
8. Generate Programming Files with Vitis
 - a. Run on Vivado TCL: `TE::sw_run_vitis -all`
Note: Scripts generate applications and bootable files, which are defined in `"sw_lib\apps_list.csv"`
 - b. (alternative) Start SDK with Vivado GUI or start with TE Scripts on Vivado TCL: `TE::sw_run_vitis`
Note: TCL scripts generate also platform project, this must be done manually in case GUI is used.
See [Vitis](#)¹⁰

⁹ <https://wiki.trenz-electronic.de/display/PD/PetaLinux+KICKstart>

¹⁰ <https://wiki.trenz-electronic.de/display/PD/Vitis>

6 Launch

For basic board setup, LEDs... see: [TEBF0808 Getting Started](#)¹¹

6.1 Programming

 Check Module and Carrier TRMs for proper HW configuration before you try any design.

Xilinx documentation for programming and debugging: [Vivado/SDK/SDSoC-Xilinx Software Programming and Debugging](#)¹²

6.1.1 Get prebuilt boot binaries

1. `_create_win_setup.cmd/_create_linux_setup.sh` and follow instructions on shell
2. Press 0 and enter to start "Module Selection Guide"
 - a. Select assembly version
 - b. Validate selection
 - c. Select Create and open delivery binary folder
Note: Folder (`<project folder>/_binaries_<Artikel Name>`) with subfolder (`boot_<app name>`) for different applications will be generated

6.1.2 QSPI

Optional for Boot.bin on QSPI Flash and image.ub on SD.

1. Connect JTAG and power on carrier with module
2. Open Vivado Project with "`vivado_open_existing_project_guimode.cmd`" or if not created, create with "`vivado_create_project_guimode.cmd`"
3. Type on Vivado TCL Console: `TE::pr_program_flash_binfile -swapp u-boot`
Note: To program with SDK/Vivado GUI, use special FSBL (`zynqmp_fsbl_flash`) on setup optional "`TE::pr_program_flash_binfile -swapp hello_te0803`" possible
4. Copy image.ub on SD-Card
 - a. use files from (`<project folder>/_binaries_<Articel Name>/boot_linux` from generated binary folder, see: [Get prebuilt boot binaries](#)(see page 19)
 - b. or use prebuilt file location, see `<design_name>/prebuilt/readme_file_location.txt`
5. Set Boot Mode to QSPI-Boot and insert SD.
 - a. Depends on Carrier, see carrier TRM.
 - b. TEBF0808 change automatically the Boot Mode to SD, if SD is inserted, optional CPLD Firmware without Boot Mode changing for microSD Slot is available on the download area

6.1.3 SD

1. Copy image.ub and Boot.bin on SD-Card.
 - use files from (`<project folder>/_binaries_<Articel Name>/boot_linux` from generated binary folder, see: [Get prebuilt boot binaries](#)(see page 19)
 - or use prebuilt file location, see `<design_name>/prebuilt/readme_file_location.txt`
2. Set Boot Mode to SD-Boot.
 - Depends on Carrier, see carrier TRM.

¹¹ <https://wiki.trenz-electronic.de/display/PD/TEBF0808+Getting+Started>

¹² <https://wiki.trenz-electronic.de/display/PD/Xilinx+Development+Tools#XilinxDevelopmentTools-XilinxSoftwareProgrammingandDebugging>

3. Insert SD-Card in SD-Slot.

6.1.4 JTAG

Not used on this Example.

6.2 Usage

1. Prepare HW like described on section [Programming](#)(see page 19)
2. Connect UART USB (JTAG XMOD)
3. Select SD Card as Boot Mode (or QSPI - depending on step 1)
Note: See TRM of the Carrier, which is used.
4. (Optional) Insert PCIe Card (detection depends on Linux driver. Only some basic drivers are installed)
5. (Optional) Connect Sata Disc
6. (Optional) Connect DisplayPort Monitor (List of usable Monitors: <https://www.xilinx.com/support/answers/68671.html>)
7. (Optional) Connect Network Cable
8. Power On PCB
Note: 1. ZynqMP Boot ROM loads PMU Firmware and FSBL from SD into OCM, 2. FSBL loads ATF(bl31.elf) and U-boot from SD/QSPI into DDR, 3. U-boot load Linux from SD into DDR.

6.2.1 Linux

1. Open Serial Console (e.g. putty)
 - a. Speed: 115200
 - b. COM Port: Win OS, see device manager, Linux OS see `dmesg |grep tty` (UART is *USB1)
2. Linux Console:
Note: Wait until Linux boot finished For Linux Login use:
 - a. User Name: root
 - b. Password: root
3. You can use Linux shell now.
 - a. I2C 0 Bus type: `i2cdetect -y -r 0`
 - b. ETH0 works with `udhcp`
 - c. USB type "`lsusb`" or connect USB device
 - d. PCIe type "`lspci`"
4. Option Features
 - a. Webserver to get access to Zynq
 - i. insert IP on web browser to start web interface
 - b. `init.sh` scripts
 - i. add `init.sh` script on SD, content will be load automatically on startup (template included in `./misc/SD`)

6.2.2 Vivado Hardware Manager

Open Vivado HW-Manager and add VIO signal to dashboard (*.ltx located on prebuilt folder).

- RGPIO Interface (**Important:** CPLD Firmware REV07 or newer is needed) for Control and Monitoring:
 - Set Enable to send Write data over RGPIO interface.
 - **Important use CPLD Firmware REV07 or newer:** <https://wiki.trenz-electronic.de/display/PD/TEBF0808+CPLD>
 - Buttons, LEDs, Status...

- Control:
 - LEDs: XMOD 2(without green dot) and HD LED are accessible.
 - CAN_S

hw_vios

8 Software Design - Vitis

For SDK project creation, follow instructions from:

Vitis¹³

8.1 Application

SDK template in ./sw_lib/sw_apps/ available.

8.1.1 zynqmp_fsbl

TE modified 2020.2 FSBL

General:

- Modified Files: xfsbl_main.c, xfsbl_hooks.h/.c, xfsbl_board.h/.c(search for 'TE Mod' on source code)
- Add Files: te_xfsbl_hooks.h/.c (for hooks and board)\n\
- General Changes:
 - Display FSBL Banner and Device Name

Module Specific:

- Add Files: all TE Files start with te_*
 - Si5345 Configuration
 - OTG+PCIe Reset over MIO
 - I2C MUX for EEPROM MAC

8.1.2 zynqmp_fsbl_flash

TE modified 2020.2 FSBL

General:

- Modified Files: xfsbl_initialisation.c, xfsbl_hw.h, xfsbl_handoff.c, xfsbl_main.c
- General Changes:
 - Display FSBL Banner
 - Set FSBL Boot Mode to JTAG
 - Disable Memory initialisation

8.1.3 zynqmp_pmufw

Xilinx default PMU firmware.

8.1.4 hello_te0807

Hello TE0807 is a Xilinx Hello World example as endless loop instead of one console output.

¹³ <https://wiki.trenz-electronic.de/display/PD/Vitis>

8.1.5 u-boot

U-Boot.elf is generated with PetaLinux. SDK/HSI is used to generate Boot.bin.

9 Software Design - PetaLinux

For PetaLinux installation and project creation, follow instructions from:

- [PetaLinux KICKstart](#)¹⁴

9.1 Config

Start with **petalinux-config** or **petalinux-config --get-hw-description**

Activate:

- CONFIG_SUBSYSTEM_PRIMARY_SD_PSU_SD_1_SELECT=y
- CONFIG_SUBSYSTEM_ETHERNET_PSU_ETHERNET_3_MAC=""

9.2 U-Boot

Start with **petalinux-config -c u-boot**

Changes:

- CONFIG_I2C_EEPROM=y
- CONFIG_ZYNQ_GEM_I2C_MAC_OFFSET=0xFA
- CONFIG_SYS_I2C_EEPROM_ADDR=0x50
- CONFIG_SYS_I2C_EEPROM_BUS=2
- CONFIG_SYS_EEPROM_SIZE=256
- CONFIG_SYS_EEPROM_PAGE_WRITE_BITS=0
- CONFIG_SYS_EEPROM_PAGE_WRITE_DELAY_MS=0
- CONFIG_SYS_I2C_EEPROM_ADDR_LEN=1
- CONFIG_SYS_I2C_EEPROM_ADDR_OVERFLOW=0
- CONFIG_SD_BOOT=y

Change platform-top.h:

9.3 Device Tree

```
/include/ "system-conf.dtsi"
/ {
    chosen {
        xlnx,eeprom = &eeprom;
    };
};

/* notes:
serdes: // PHY TYP see: dt-bindings/phy/phy.h
*/

/* default */
```

¹⁴ <https://wiki.trenz-electronic.de/display/PD/PetaLinux+KICKstart>

```

&sata {
    phy-names = "sata-phy";
    phys = <&lane2 1 0 1 1500000000>;

```

9.4 FSBL patch

Must be add manually, see template

9.5 Kernel

Start with **petalinux-config -c kernel**

Changes:

- # CONFIG_CPU_IDLE is not set
- # CONFIG_CPU_FREQ is not set
- CONFIG_EDAC_CORTEX_ARM64=y
- # CONFIG_CPU_IDLE is not set
- # CONFIG_CPU_FREQ is not set
- CONFIG_NVME_CORE=y
- CONFIG_BLK_DEV_NVME=y
- # CONFIG_NVME_MULTIPATH is not set
- # CONFIG_NVME_TCP is not set
- CONFIG_NVME_TARGET=y
- # CONFIG_NVME_TARGET_LOOP is not set
- # CONFIG_NVME_TARGET_FC is not set
- # CONFIG_NVME_TARGET_TCP is not set
- CONFIG_NVM=y
- CONFIG_NVM_PBLK=y
- CONFIG_NVM_PBLK_DEBUG=y
- CONFIG_EDAC_CORTEX_ARM64=y
- CONFIG_SATA_AHCI=y
- CONFIG_SATA_MOBILE_LPM_POLICY=0

9.6 Rootfs

Start with **petalinux-config -c rootfs**

Changes:

- CONFIG_i2c-tools=y
- CONFIG_busybox-httpd=y (for web server app)
- CONFIG_packagegroup-petalinux-utils(util-linux,cpufrequtils,bridge-utils,mtd-utils,usbutils,pciutils,canutils,i2c-tools,smartmontools,e2fsprogs)

9.7 Applications

See: \os\petalinux\project-spec\meta-user\recipes-apps\

9.7.1 startup

Script App to load init.sh from SD Card if available.

9.7.2 webfwu

Webserver application accemble for Zynq access. Need busybox-httpd

11.7 Technology Licenses

The hardware / firmware / software described in this document are furnished under a license and may be used / modified / copied only in accordance with the terms of such license.

11.8 Environmental Protection

To confront directly with the responsibility toward the environment, the global community and eventually also oneself. Such a resolution should be integral part not only of everybody's life. Also enterprises shall be conscious of their social responsibility and contribute to the preservation of our common living space. That is why Trenz Electronic invests in the protection of our Environment.

11.9 REACH, RoHS and WEEE

REACH

Trenz Electronic is a manufacturer and a distributor of electronic products. It is therefore a so called downstream user in the sense of REACH¹⁹. The products we supply to you are solely non-chemical products (goods). Moreover and under normal and reasonably foreseeable circumstances of application, the goods supplied to you shall not release any substance. For that, Trenz Electronic is obliged to neither register nor to provide safety data sheet. According to present knowledge and to best of our knowledge, no SVHC (Substances of Very High Concern) on the Candidate List²⁰ are contained in our products. Furthermore, we will immediately and unsolicited inform our customers in compliance with REACH - Article 33 if any substance present in our goods (above a concentration of 0,1 % weight by weight) will be classified as SVHC by the European Chemicals Agency (ECHA)²¹.

RoHS

Trenz Electronic GmbH herewith declares that all its products are developed, manufactured and distributed RoHS compliant.

WEEE

Information for users within the European Union in accordance with Directive 2002/96/EC of the European Parliament and of the Council of 27 January 2003 on waste electrical and electronic equipment (WEEE).

Users of electrical and electronic equipment in private households are required not to dispose of waste electrical and electronic equipment as unsorted municipal waste and to collect such waste electrical and electronic equipment separately. By the 13 August 2005, Member States shall have ensured that systems are set up allowing final holders and distributors to return waste electrical and electronic equipment at least free of charge. Member States shall ensure the availability and accessibility of the necessary collection facilities. Separate collection is the precondition to ensure specific treatment and recycling of waste electrical and electronic equipment and is necessary to achieve the chosen level of protection of human health and the environment in the European Union. Consumers have to actively contribute to the success of such collection and the return of waste electrical and electronic equipment. Presence of hazardous substances in electrical and electronic equipment results in potential effects on the environment and human health. The symbol consisting of the crossed-out wheeled bin indicates separate collection for waste electrical and electronic equipment.

Trenz Electronic is registered under WEEE-Reg.-Nr. DE97922676.
