4 Overview

Refer to <http://trenz.org/te0835-info>¹ for the current online version of this manual and other available documentation.

4.1 Key Features

- Vitis/Vivado 2020.2
- PetaLinux
- RF Analyzer 2020.2
- PCIe (endpoint)
- SD
- ETH
- USB
- I2C
- RTC
- FMeter
- Modified FSBL for SI5395 programming
- Special FSBL for QSPI programming

4.2 Revision History

Date	Vivado	Project Built	Authors	Description
2022-02-24	2020.2	TE0835-test_board_noprebuilt-vivado_2020.2-build_9_20220223123143.zip TE0835-test_board-vivado_2020.2-build_9_20220223123124.zip	Mohsen Chamanbaz	<ul style="list-style-type: none"> • XCZU47DR variant was added. • HDL files for XCZU25DR has been updated. • RF analyzer software was updated to 2020.2 version.
2022-02-11	2020.2	TE0835-test_board_noprebuilt-vivado_2020.2-build_5_20220211054445.zip TE0835-test_board-vivado_2020.2-build_5_20220211054430.zip	Mohsen Chamanbaz/ John Hartfiel	<ul style="list-style-type: none"> • Bugfix, now with 20.2 FSBL

¹ <https://wiki.trenz-electronic.de/display/PD/TE0835+Resources>

Date	Vivado	Project Built	Authors	Description

Table 1: Design Revision History

4.3 Release Notes and Known Issues

Issues	Description	Workaround	To be fixed version
Updating the signal property failed, while the generation of the signal is already in progress	It is difficult to update the property of the generated signal while the generation of the signal by DACs is already running. The Generation button must be clicked several times to make the change in the output.	<ul style="list-style-type: none"> • It is recommended to reprogram and initialize the board again if such situation happens. 	Solved with 2022-02-24 update

Table 2: Known Issues

4.4 Requirements

4.4.1 Software

Software	Version	Note
Vitis	2020.2	needed, Vivado is included into Vitis installation
PetaLinux	2020.2	needed
RF Analyzer	2020.2	needed
SI ClockBuilder Pro	---	optional

Table 3: Software

4.4.2 Hardware

Basic description of TE Board Part Files is available on [TE Board Part Files](#)².

Complete List is available on <design name>/board_files/*_board_files.csv

Design supports following modules:

Module Model	Board Part Short Name	PCB Revision Support	DDR	QSPI Flash	EMMC	Others	Notes
TE0835-02-MXE21-A	25dr_1e_4gb	REV2	4GB	128MB	NA	NA	NA
TE0835-02-TXE21-A*	47dr_1e_4gb	REV2	4GB	128MB	NA	NA	NA

Table 4: Hardware Modules

* used as reference

Design supports following carriers:

² <https://wiki.trenz-electronic.de/display/PD/TE+Board+Part+Files>

Carrier Model	Notes
TEB0835-02*	

Table 5: Hardware Carrier

* used as reference

Additional HW Requirements:

Additional Hardware	Notes
Micro USB Cable for JTAG/UART	
Cooler	It is strongly recommended that the RFSoC should not be used without heat sink.
SMA male connector cable	Some ADC inputs/DAC outouts have the SMA connector
UFL female connector cable	Some ADC inputs/DAC outouts have the UFL connector
Ethernet cable	
SD card	16GB
Signal generator (optional)	To feed a desired signal to the input of ADC
Oscilloscope (optional)	To monitor the output signal of DACs.
PC	With ATX Power supply and PCIe X8 slot

Table 6: Additional Hardware

* used as reference

4.5 Content

For general structure and of the reference design, see [Project Delivery - AMD devices](#)³

4.5.1 Design Sources

³ <https://wiki.trenz-electronic.de/display/PD/Project+Delivery+-+AMD+devices>

Type	Location	Notes
Vivado	<design name>/ block_design <design name>/constraints <design name>/ip_lib	Vivado Project will be generated by TE Scripts
Vitis	<design name>/sw_lib	Additional Software Template for Vitis and apps_list.csv with settings automatically for Vitis app generation
PetaLinux	<design name>/os/ petalinux	PetaLinux template with current configuration

Table 7: Design sources

4.5.2 Additional Sources

Type	Location	Notes
SI5395 (PLL of the RFSoC Module)	<design name>/misc/ Si5395	SI5395 Project with current PLL Configuration
SI5395 (PLL of the carrier board)	<design name>/misc/ Si5395	SI5395 Project with current PLL Configuration
init.sh	<project folder>\misc\sd\	Additional Initialization Script for Linux

Table 8: Additional design sources

4.5.3 Prebuilt

File	File-Extension	Description
BIF-File	*.bif	File with description to generate Bin-File
BIN-File	*.bin	Flash Configuration File with Boot-Image (Zynqmp RFSoC-FPGAs)

File	File-Extension	Description
BIT-File	*.bit	FPGA (PL Part) Configuration File
DebugProbes-File	*.ltx	Definition File for Vivado/Vivado Labtools Debugging Interface
Diverse Reports	---	Report files in different formats
Hardware-Platform-Specification-Files	*.xsa	Exported Vivado Hardware Specification for Vitis and PetaLinux
LabTools Project-File	*.lpr	Vivado Labtools Project File
OS-Image	*.ub	Image with Linux Kernel (On Petalinux optional with Devicetree and RAM-Disk)
Software-Application-File	*.elf	Software Application for Zynqmp RFSoC or MicroBlaze Processor Systems
Clock Builder Pro project file	*.slabtimeproj	Defines the necessary clock frequencies for the PLLs on the RFSoC module and carrier board

Table 9: Prebuilt files (only on ZIP with prebuilt content)

4.5.4 Download

Reference Design is only usable with the specified Vivado/Vitis/Petalinux version. Do never use different Versions of Xilinx Software for the same Project.

Reference Design is available on:

- TE0835 "Test Board" Reference Design⁴

4.5.5 Software Setup

Download RF Analyzer GUI from the following link and install it.

- RF Analyzer⁵

⁴ https://shop.trenz-electronic.de/Download/?path=Trenz_Electronic/Modules_and_Module_Carriers/6.5x9/TE0835/Reference_Design/2020.2/test_board

⁵ <https://www.xilinx.com/products/silicon-devices/soc/rfsoc.html#resources>

5 Design Flow

⚠ Reference Design is available with and without prebuilt files. It's recommended to use TE prebuilt files for first lunch.

Trenz Electronic provides a tcl based built environment based on Xilinx Design Flow.

See also:

- [AMD Development Tools⁶](#)
- [Vivado Projects - TE Reference Design⁷](#)
- [Project Delivery - AMD devices⁸](#)

The Trenz Electronic FPGA Reference Designs are TCL-script based project. Command files for execution will be generated with "_create_win_setup.cmd" on Windows OS and "_create_linux_setup.sh" on Linux OS.

TE Scripts are only needed to generate the vivado project, all other additional steps are optional and can also be executed by Xilinx Vivado/SDK GUI. For currently Scripts limitations on Win and Linux OS see: [Project Delivery - AMD devices⁹](#)

⚠ Caution! Win OS has a 260 character limit for path lengths which can affect the Vivado tools. To avoid this issue, use Virtual Drive or the shortest possible names and directory locations for the reference design (for example "x:\<project folder>")

1. Run _create_win_setup.cmd/_create_linux_setup.sh and follow instructions on shell:

_create_win_setup.cmd/_create_linux_setup.sh

```
-----Set design paths-----
-- Run Design with: _create_win_setup
-- Use Design Path: <absolute project path>
-----
-----TE Reference Design-----
-----
-- (0) Module selection guide, project creation...prebuilt export...
-- (1) Create minimum setup of CMD-Files and exit Batch
-- (2) Create maximum setup of CMD-Files and exit Batch
-- (3) (internal only) Dev
-- (4) (internal only) Prod
-- (c) Go to CMD-File Generation (Manual setup)
-- (d) Go to Documentation (Web Documentation)
-- (g) Install Board Files from Xilinx Board Store (beta)
-- (a) Start design with unsupported Vivado Version (beta)
-- (x) Exit Batch (nothing is done!)
-----
Select (ex.: '0' for module selection guide):
```

2. Press 0 and enter to start "Module Selection Guide"
3. Create project and follow instructions of the product selection guide, settings file will be configured automatically during this process.

⁶ <https://wiki.trenz-electronic.de/display/PD/AMD+Development+Tools#AMDDevelopmentTools-XilinxSoftware-BasicUserGuides>

⁷ <https://wiki.trenz-electronic.de/display/PD/Vivado+Projects+-+TE+Reference+Design>

⁸ <https://wiki.trenz-electronic.de/display/PD/Project+Delivery+-+AMD+devices>

⁹ <https://wiki.trenz-electronic.de/display/PD/Project+Delivery+-+AMD+devices#ProjectDeliveryAMDdevices-Currentlylimitationsoffunctionality>

- optional for manual changes: Select correct device and Xilinx install path on "design_basic_settings.cmd" and create Vivado project with "vivado_create_project_guimode.cmd"

⚠ Note: Select correct one, see also [Vivado Board Part Flow](#)¹⁰

4. Create hardware description file (.xsa file) for PetaLinux project and export to prebuilt folder

run on Vivado TCL (Script generates design and export files into "\prebuilt\hardware\")

```
\prebuilt\hardware\"")>
TE::hw_build_design -export_prebuilt
```

ⓘ Using Vivado GUI is the same, except file export to prebuilt folder.

5. Create and configure your PetaLinux project with exported .xsa-file, see [PetaLinux KICKstart](#)¹¹
 - use TE Template from "<project folder>\os\petalinux"
 - use exported .xsa file from "<project folder>\prebuilt\hardware\<short name>". **Note:** HW Export from Vivado GUI creates another path as default workspace.
 - The build images are located in the "<plnx-proj-root>/images/linux" directory
6. Configure the **boot.scr** file as needed, see [Distro Boot with Boot.scr](#)¹²
7. Copy PetaLinux build image files to prebuilt folder
 - copy **u-boot.elf**, **image.ub** and **boot.scr** from "<plnx-proj-root>/images/linux" to prebuilt folder

ⓘ "<project folder>\prebuilt\os\petalinux\<ddr size>" or "<project folder>\prebuilt\os\petalinux\<short name>"

8. Generate Programming Files with Vitis

run on Vivado TCL (Script generates applications and bootable files, which are defined in "test_board\sw_lib\apps_list.csv")

```
TE::sw_run_vitis -all
TE::sw_run_vitis (optional; Start Vitis from Vivado GUI or start with TE Scripts on Vivado TCL)
```

⚠ TCL scripts generate also platform project, this must be done manually in case GUI is used. See [Vitis](#)¹³

¹⁰ <https://wiki.trenz-electronic.de/display/PD/Vivado+Board+Part+Flow>

¹¹ <https://wiki.trenz-electronic.de/display/PD/PetaLinux+KICKstart>

¹² <https://wiki.trenz-electronic.de/display/PD/Distro+Boot+with+Boot.scr>

¹³ <https://wiki.trenz-electronic.de/display/PD/Vitis>

6 Launch

6.1 Programming

⚠ Check Module and Carrier TRMs for proper HW configuration before you try any design. Reference Design is also available with prebuilt files. It's recommended to use TE prebuilt files for first launch.

Xilinx documentation for programming and debugging: [AMD Development Tools](#)¹⁴

6.1.1 Get prebuilt boot binaries

1. _create_win_setup.cmd/_create_linux_setup.sh and follow instructions on shell
2. Press 0 and enter to start "Module Selection Guide"
 - a. Select assembly version
 - b. Validate selection
 - c. Select Create and open delivery binary folder

i Note: Folder "<project folder>_binaries_<Article Name>" with subfolder "boot_<app name>" for different applications will be generated

6.1.2 QSPI-Boot mode

Option for **Boot.bin** on QSPI Flash and **image.ub** and **boot.scr** on **SD or USB**.

1. Connect **JTAG** and power on carrier with module
2. Open Vivado Project with "vivado_open_existing_project_guimode.cmd" or if not created, create with "vivado_create_project_guimode.cmd"

run on Vivado TCL (Script programs BOOT.bin on QSPI flash)

```
TE:::pr_program_flash -swapp u-boot  
TE:::pr_program_flash -swapp hello_te0820 (optional)
```

⚠ To program with Vitis/Vivado GUI, use special FSBL (fsbl_flash) on setup

3. Copy **image.ub** and **boot.scr** on **SD or USB**
 - use files from "<project folder>_binaries_<Article Name>\boot_linux" from generated binary folder, see: [Get prebuilt boot binaries](#)(see page 15)
 - or use prebuilt file location, see "<project folder>\prebuilt\file_location.txt"
4. Set Boot Mode to **QSPI-Boot** and insert **SD or USB**.
 - Depends on Carrier, see carrier TRM.

¹⁴ <https://wiki.trenz-electronic.de/display/PD/AMD+Development+Tools#AMDDevelopmentTools-XilinxSoftwareProgrammingandDebugging>

6.1.3 SD-Boot mode

1. Copy **image.ub** and **Boot.bin** on **SD-Card**
 - use files from (<project folder>/_binaries_<Articel Name>)/boot_linux from generated binary folder, see: [Get prebuilt boot binaries\(see page 15\)](#)
 - or use prebuilt file location, see <design_name>/prebuilt/readme_file_location.txt
2. Set Boot Mode to SD-Boot.
 - Depends on Carrier, see carrier TRM.
3. Insert SD-Card in SD-Slot.

6.1.4 JTAG

Not used on this Example.

6.1.5 Hardware Setup

The Hardware contains of a TE0835 module and TEB0835 carrier board and has 8 ADC inputs and 8 DAC outputs.

1. Plug the TE0835 module on the TEB0835 carrier board
2. Install the cooler on the RFSoC chip
 - a. Attention: It is strongly recommended that the RFSoC should not be used without heat sink.
3. Connect the micro USB cable to the J29 connector
4. Plug the board on the PCIe port of the PC
5. Plug the prepared SD card on the SD card socket (J28)
6. Connect a cable with SMA or UFL connector to one of the DAC connector (for example DAC0 J9) and feed it back to the related ADC input (for example ADC0 J1)
7. (optional) A signal generator can be used to feed desired signal to ADC input.
8. (optional) An oscilloscope can be used to monitor the output signal of DAC.

6.1.6 Usage

1. Prepare HW like described on section [Hardware Setup\(see page 16\)](#)
2. Connect UART USB (most cases same as JTAG)
3. Select SD Card as Boot Mode (or QSPI - depending on step 1)

 Note: See TRM of the Carrier, which is used.

 Starting with Petalinux version 2020.1, the industry standard "Distro-Boot" boot flow for U-Boot was introduced, which significantly expands the possibilities of the boot process and has the primary goal of making booting much more standardised and predictable. The boot options described above describe the common boot processes for this hardware; other boot options are possible.

For more information see [Distro Boot with Boot.scr](#)¹⁵

4. Power On PCB
boot process
 1. Zynqmp RFSoC Boot ROM loads FSBL from SD into OCM

¹⁵ <https://wiki.trenz-electronic.de/display/PD/Distro+Boot+with+Boot.scr>

2. FSBL loads U-boot from SD into DDR,
3. U-boot loads Linux (**image.ub**) from SD/QSPI/... into DDR

6.1.7 Linux

1. Open Serial Console (e.g. putty)

- Speed: 115200
- select COM Port

 Win OS, see device manager, Linux OS see dmesg |grep tty (UART is *USB1)

2. Linux Console:

```
petalinux login: root  
Password: root
```

 Note: Wait until Linux boot finished

3. You can use Linux shell now.

```
i2cdetect -y -r 0      (check I2C Bus; BUS 0 up to 5 possible)  
dmesg | grep rtc       (RTC check)  
udhcpc                 (ETH0 check)  
lsusb                  (USB check)
```

4. Option Features

- Webserver to get access to Zynqmp RFSoC
 - insert IP on web browser to start web interface
- init.sh scripts
 - add init.sh script on SD, content will be load automatically on startup (template included in "<project folder>\misc\SD")

6.1.8 Vivado HW Manager

Open Vivado HW-Manager and add VIO signal to dashboard (*.ltx located on prebuilt folder)

- Monitoring:
 - The output frequency of MMCM blocks can be monitored.
 - Set radix from VIO signals to unsigned integer.
 - The temperature of ARM processor and FPGA can be measured too.

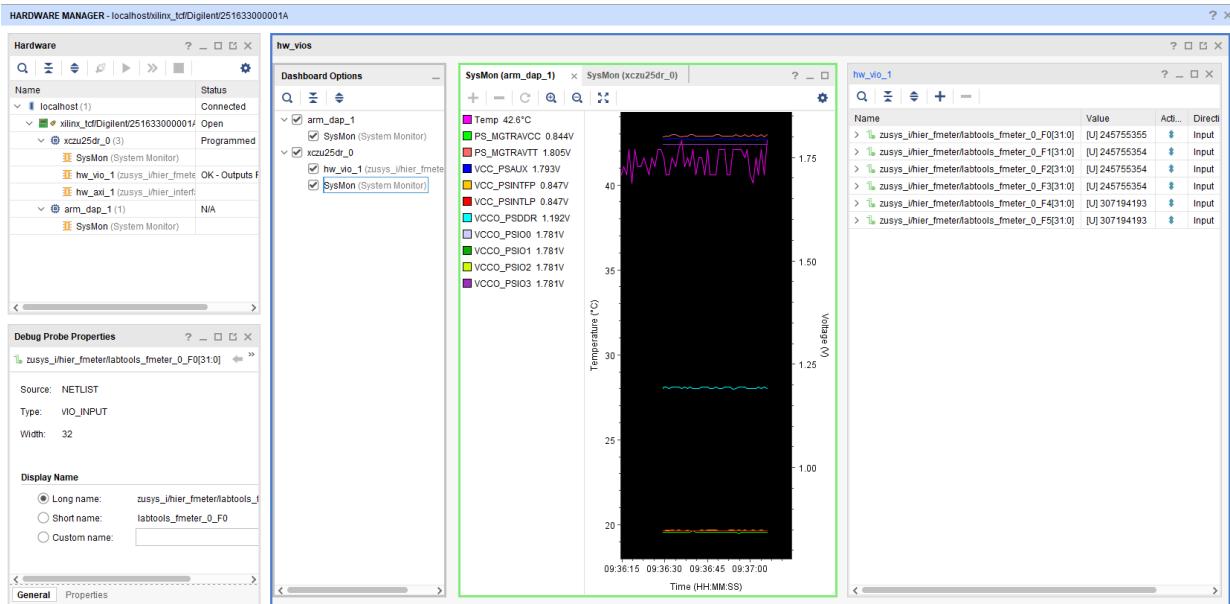

Figure 1: Vivado Hardware Manager

6.1.9

RF Analyzer

1. Open the RF Analyzer GUI
2. Click on Connect button
3. Adjust the desired JTAG frequency (for example 30MHZ)
4. Give the generated bitstream file path
5. Click on Download Bitstream button to load the Bitstream file on the FPGA
6. When downloading is finished, click on Select Target button
7. After initialisation, all ADCs/DACs tiles are visible
8. Click on desired DAC tile and choose a DAC (for example DAC0)
9. Adjust desired DAC properties (for example output frequency)
10. Click on Generate button to generate the signal in output of DAC
11. Click on the related ADC tile and choose the related ADC (for example ADC0)
12. Click on Acquire button to acquire the input signal
13. The spectrum of the DAC output signal can be seen now. The signal can be visible in time domain too.
 - a. Tip: In menu Window click on Multiview to see all of DACs and ADCs simultaneously.

DAC Tile 0-DAC 0	DAC0_P/ DAC0_N	N2/N1	103/101	DAC0_P/ DAC0_N	J9	SMA
DAC Tile 0-DAC 2	DAC1_P/ DAC1_N	L2/L1	109/107	DAC1_P/ DAC1_N	J10	UFL
DAC Tile 1-DAC 0	DAC2_P/ DAC2_N	J2/J1	121/119	DAC2_P/ DAC2_N	J11	SMA
DAC Tile 1-DAC 2	DAC3_P/ DAC3_N	G2/G1	127/125	DAC3_P/ DAC3_N	J12	UFL
DAC Tile 2-DAC 0	DAC4_P/ DAC4_N	E2/E1	133/131	DAC4_P/ DAC4_N	J13	UFL
DAC Tile 2-DAC 2	DAC5_P/ DAC5_N	C2/C1	139/137	DAC5_P/ DAC5_N	J14	UFL
DAC Tile 3-DAC 0	DAC6_P/ DAC6_N	B4/A4	151/149	DAC6_P/ DAC6_N	J15	UFL
DAC Tile 1-DAC 2	DAC7_P/ DAC7_N	B6/A6	157/155	DAC7_P/ DAC7_N	J16	UFL

As an example the GUI should be seen after initialization as below:

Overview for TE0835-02-MXE21-A

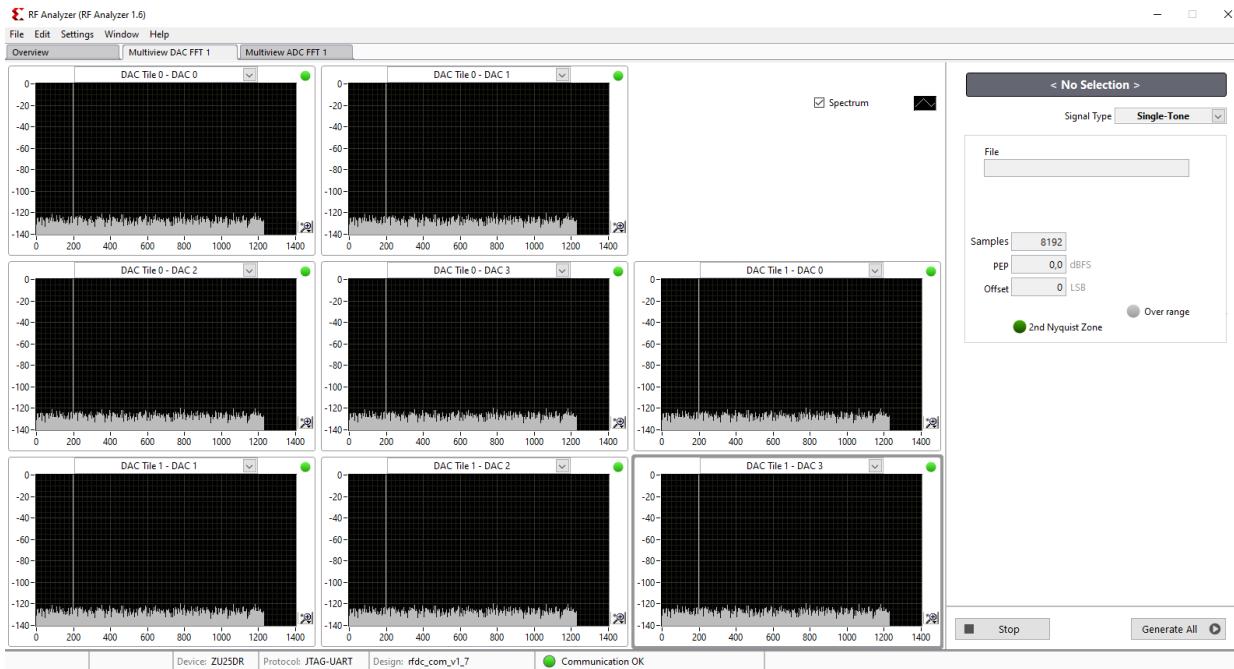

Overview for TE0835-02-TXE21-A

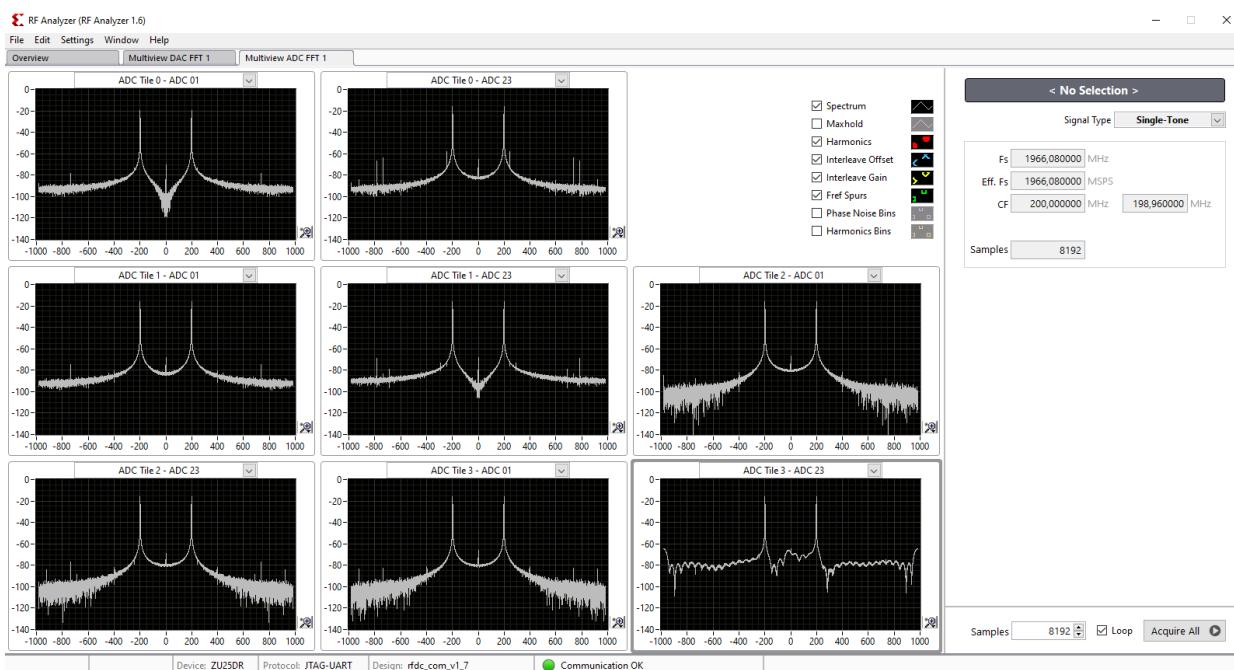

For example, when all DACs are in operation, the GUI can be seen as below:

DACs

For example, when all ADCs are in operation, the GUI can be seen as below:

ADCs

7 System Design - Vivado

7.1 Block Design

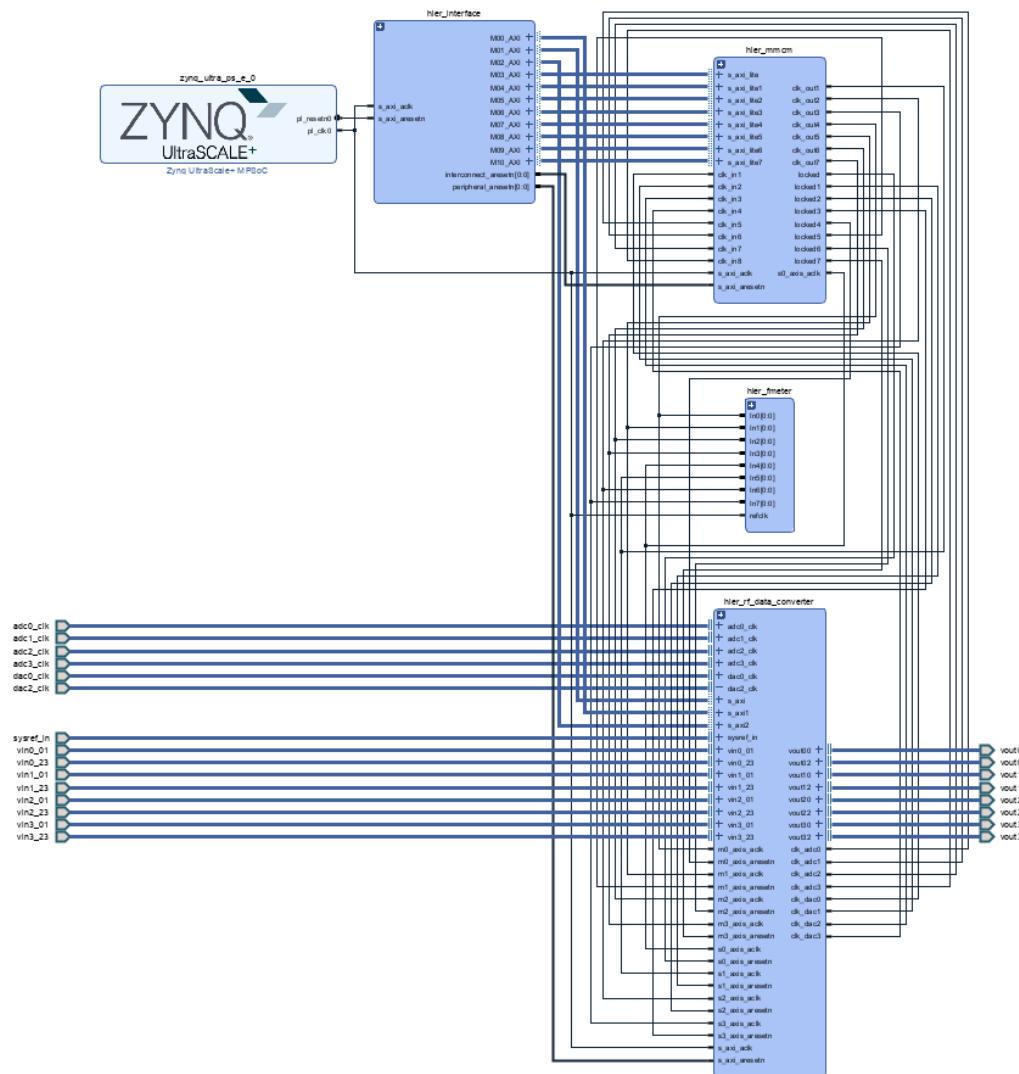

Figure 2: Block Design

7.1.1 PS Interfaces

Activated interfaces:

Type	Note
DDR	
QSPI	MIO
SD1	MIO
I2C0	MIO
I2C1	MIO
UART0	MIO
GPIO0	MIO
GPIO1	MIO
GPIO2	MIO
SWDT0..1	
TTC0..3	
GEM3	MIO
USB0	MIO
PCIe	MIO

Table 10: PS Interfaces

7.2 Constraints

7.2.1 Basic module constraints

_i_bitgen_common.xdc

```
set_property BITSTREAM.GENERAL.COMPRESS TRUE [current_design]
set_property BITSTREAM.CONFIG.UNUSEDPIN_PULLNONE [current_design]
```

7.2.2 Design specific constrain

Constraint files for TE0835-02-MXE21-A

_i_false_path.xdc

```

# special, incidental, or consequential loss or damage
# (including loss of data, profits, goodwill, or any type of
# loss or damage suffered as a result of any action brought
# by a third party) even if such damage or loss was
# reasonably foreseeable or Xilinx had been advised of the
# possibility of the same.
#
# CRITICAL APPLICATIONS
# Xilinx products are not designed or intended to be fail-
# safe, or for use in any application requiring fail-safe
# performance, such as life-support or safety devices or
# systems, Class III medical devices, nuclear facilities,
# applications related to the deployment of airbags, or any
# other applications that could lead to death, personal
# injury, or severe property or environmental damage
# (individually and collectively, "Critical
# Applications"). Customer assumes the sole risk and
# liability of any use of Xilinx products in Critical
# Applications, subject only to applicable laws and
# regulations governing limitations on product liability.

# related to, arising under or in connection with these
# materials, including for any direct, or any indirect,
# special, incidental, or consequential loss or damage
# (including loss of data, profits, goodwill, or any type of
# loss or damage suffered as a result of any action brought
# by a third party) even if such damage or loss was
# reasonably foreseeable or Xilinx had been advised of the
# possibility of the same.
#
# CRITICAL APPLICATIONS
# Xilinx products are not designed or intended to be fail-
# safe, or for use in any application requiring fail-safe
# performance, such as life-support or safety devices or
# systems, Class III medical devices, nuclear facilities,
# applications related to the deployment of airbags, or any
# other applications that could lead to death, personal
# injury, or severe property or environmental damage
# (individually and collectively, "Critical
# Applications"). Customer assumes the sole risk and
# liability of any use of Xilinx products in Critical
```

```
# Applications, subject only to applicable laws and
# regulations governing limitations on product liability.

8 Software Design - Vitis

For SDK project creation, follow instructions from:

Vitis¹⁶

8.1 Application

Template location: ./sw_lib/sw_apps/

8.1.1 zynqmp_fsbl

TE modified 2020.2 FSBL

General:

- Modified Files: xfsbl_main.c, xfsbl_hooks.h/.c, xfsbl_board.h/.c(search for 'TE Mod' on source code)
- Add Files: te_xfsbl_hooks.h/.c (for hooks and board)
- General Changes:
 - Display FSBL Banner and Device Name

Module Specific:

- Add Files: all TE Files start with te_*
 - Si5395 on the TE0835 RFSoC module configuration
 - Si5395 on the TEB0835 carrier board configuration

8.1.2 zynqmp_fsbl_flash

TE modified 2020.2 FSBL

General:

- Modified Files: xfsbl_initialisation.c, xfsbl_hw.h, xfsbl_handoff.c, xfsbl_main.c
- General Changes:
 - Display FSBL Banner
 - Set FSBL Boot Mode to JTAG
 - Disable Memory initialisation

8.1.3 zynqmp_pmufw

Xilinx default PMU firmware.

8.1.4 hello_te0835

Hello TE0835 is a Xilinx Hello World example as endless loop instead of one console output.

8.1.5 u-boot

U-Boot.elf is generated with PetaLinux. Vitis is used to generate Boot.bin.

¹⁶ <https://wiki.trenz-electronic.de/display/PD/Vitis>

9 Software Design - PetaLinux

For PetaLinux installation and project creation, follow instructions from:

- [PetaLinux KICKstart¹⁷](#)

9.1 Config

Start with **petalinux-config** or **petalinux-config --get-hw-description**

Changes:

- CONFIG_SUBSYSTEM_ETHERNET_PSU_ETHERNET_3_MAC=""

9.2 U-Boot

Start with **petalinux-config -c u-boot**

Changes:

- CONFIG_ENV_IS_NOWHERE=y
- # CONFIG_ENV_IS_IN_SPI_FLASH is not set
- CONFIG_I2C_EEPROM=y
- CONFIG_ZYNQ_GEM_I2C_MAC_OFFSET=0xFA
- CONFIG_SYS_I2C_EEPROM_ADDR=0
- CONFIG_SYS_I2C_EEPROM_BUS=0
- CONFIG_SYS_EEPROM_SIZE=256
- CONFIG_SYS_EEPROM_PAGE_WRITE_BITS=0
- CONFIG_SYS_EEPROM_PAGE_WRITE_DELAY_MS=0
- CONFIG_SYS_I2C_EEPROM_ADDR_LEN=1
- CONFIG_SYS_I2C_EEPROM_ADDR_OVERFLOW=0

Change platform-top.h:

```
/* This file is generated by petalinux-build. Any changes made here will be lost. */
```

9.3 Device Tree

```
/include/ "system-conf.dtsi"
{
    chosen {
        xlnx,eeeprom = &eeeprom;
    };
};

/* SDIO */

&sdhci1 {
    disable-wp;
    no-1-8-v;
```

¹⁷ <https://wiki.trenz-electronic.de/display/PD/PetaLinux+KICKstart>

```
};

/* ETH PHY */
&gem3 {

};

};
```

9.4 FSBL patch

Must be add manually, see template

9.5

Kernel

Start with **petalinux-config -c kernel**

Changes:

- CONFIG_CPU_IDLE is not set (only needed to fix JTAG Debug issue)
- CONFIG_CPU_FREQ is not set (only needed to fix JTAG Debug issue)
- CONFIG_EDAC_CORTEX_ARM64=y

9.6 Rootfs

Start with **petalinux-config -c rootfs**

Changes:

- CONFIG_i2c-tools=y
- CONFIG_busybox-httpd=y (for web server app)
- CONFIG_packagegroup-petalinux-utils(util-linux,cpufrequtils,bridge-utils,mtd-utils,usbutils,pciutils,canutils,i2c-tools,smartmontools,e2fsprogs)

9.7 Applications

See: "<project folder>\os\petalinux\project-spec\meta-user\recipes-apps\"

9.7.1 startup

Script App to load init.sh from SD Card if available.

9.7.2 webfwu

Webserver application acsemble for Zynqmp RFSoC access. Need busybox-httpd

10 Additional Software

No additional software is needed.

10.1 SI5395 of RFSoC module

File location <design name>/misc/Si5395/Si5395-*~835-*~.slabtimproj

General documentation how you work with these project will be available on [Si5395¹⁸](#)

10.2 SI5395 of carrier board

File location <design name>/misc/Si5395/Si5395-*~B835-*~.slabtimproj

General documentation how you work with these project will be available on [Si5395¹⁹](#)

11.2 Legal Notices

11.3 Data Privacy

Please also note our data protection declaration at <https://www.trenz-electronic.de/en/Data-protection-Privacy>

11.4 Document Warranty

The material contained in this document is provided “as is” and is subject to being changed at any time without notice. Trenz Electronic does not warrant the accuracy and completeness of the materials in this document. Further, to the maximum extent permitted by applicable law, Trenz Electronic disclaims all warranties, either express or implied, with regard to this document and any information contained herein, including but not limited to the implied warranties of merchantability, fitness for a particular purpose or non infringement of intellectual property. Trenz Electronic shall not be liable for errors or for incidental or consequential damages in connection with the furnishing, use, or performance of this document or of any information contained herein.

11.5 Limitation of Liability

In no event will Trenz Electronic, its suppliers, or other third parties mentioned in this document be liable for any damages whatsoever (including, without limitation, those resulting from lost profits, lost data or business interruption) arising out of the use, inability to use, or the results of use of this document, any documents linked to this document, or the materials or information contained at any or all such documents. If your use of the materials or information from this document results in the need for servicing, repair or correction of equipment or data, you assume all costs thereof.

11.6 Copyright Notice

No part of this manual may be reproduced in any form or by any means (including electronic storage and retrieval or translation into a foreign language) without prior agreement and written consent from Trenz Electronic.

11.7 Technology Licenses

The hardware / firmware / software described in this document are furnished under a license and may be used / modified / copied only in accordance with the terms of such license.

11.8 Environmental Protection

To confront directly with the responsibility toward the environment, the global community and eventually also oneself. Such a resolution should be integral part not only of everybody's life. Also enterprises shall be conscious of their social responsibility and contribute to the preservation of our common living space. That is why Trenz Electronic invests in the protection of our Environment.

11.9 REACH, RoHS and WEEE

REACH

Trenz Electronic is a manufacturer and a distributor of electronic products. It is therefore a so called downstream user in the sense of REACH²³. The products we supply to you are solely non-chemical products (goods). Moreover and under normal and reasonably foreseeable circumstances of application, the goods supplied to you shall not release any substance. For that, Trenz Electronic is obliged to neither register nor to provide safety data sheet. According to present knowledge and to best of our knowledge, no SVHC (Substances of Very High Concern) on the Candidate List²⁴ are contained in our products. Furthermore, we will immediately and unsolicited inform our customers in compliance with REACH - Article 33 if any substance present in our goods (above a concentration of 0,1 % weight by weight) will be classified as SVHC by the European Chemicals Agency (ECHA)²⁵.

RoHS

Trenz Electronic GmbH herewith declares that all its products are developed, manufactured and distributed RoHS compliant.

WEEE

Information for users within the European Union in accordance with Directive 2002/96/EC of the European Parliament and of the Council of 27 January 2003 on waste electrical and electronic equipment (WEEE).

Users of electrical and electronic equipment in private households are required not to dispose of waste electrical and electronic equipment as unsorted municipal waste and to collect such waste electrical and electronic equipment separately. By the 13 August 2005, Member States shall have ensured that systems are set up allowing final holders and distributors to return waste electrical and electronic equipment at least free of charge. Member States shall ensure the availability and accessibility of the necessary collection facilities. Separate collection is the precondition to ensure specific treatment and recycling of waste electrical and electronic equipment and is necessary to achieve the chosen level of protection of human health and the environment in the European Union. Consumers have to actively contribute to the success of such collection and the return of waste electrical and electronic equipment. Presence of hazardous substances in electrical and electronic equipment results in potential effects on the environment and human health. The symbol consisting of the crossed-out wheeled bin indicates separate collection for waste electrical and electronic equipment.

Trenz Electronic is registered under WEEE-Reg.-Nr. DE97922676.
